- Bonus: **FREE warranty upgrade from 3 to 5 years** with every product registration

Model of Female Breast with Healthy & Unhealthy Tissue — 3B Smart Anatomy

The Model of Female Breast with Healthy & Unhealthy Tissue (Item No. 1008497 [L56], 1.4 kg) by 3B Scientific, Germany is a valuable tool to demonstrate the differences between healthy and unhealthy breast tissue, with a right and left breast depicting common diseases including mastitis, fibrocystic breast condition, and malignant tumors.

Lactating right breast — inflammation compared side-by-side with healthy tissue. Medially divided into 2 halves, showing healthy lactating breast tissue on the cut surface of the external half, and breast gland inflammation (mastitis) on the cut surface of the inner half.

Non-lactating left breast — a full progression of pathology in one model. With 2 sagittal cuts separating it into 3 parts, this side shows healthy anatomical structures on the external sectional plane, windowed skin to view regional lymph nodes, cysts and fibroadenoma on the middle breast cut's external plane, pathological proliferation of breast connective tissue (fibrocystic breast disease) on the middle cut's inner plane, and malignant tumors on the inner breast cut — giving a complete visual progression from normal tissue through benign and malignant pathology.

Magnetic assembly for easy demonstration. Both models are held together with magnets, making it simple to take apart and reassemble during teaching.

Ideal for teaching, patient education, and awareness. Use this model to teach students about breast diseases, educate patients directly, and raise general awareness of common breast conditions.

Includes free 3B Smart Anatomy digital access. Every original 3B Scientific model includes free access to the 3B Smart Anatomy course, hosted inside the Complete Anatomy app by 3D4Medical — featuring 23 digital anatomy lectures, 117 virtual anatomy models, and 39 anatomy quizzes, plus a free warranty upgrade from 3 to 5 years upon product registration.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorised distributor of 3B Scientific products in India with over 30 years of experience supplying medical education resources to 1,500+ institutions across 28 states. We provide pan-India delivery and dedicated after-sales support.

Frequently Asked Questions

Q: What conditions does this model show? A: Mastitis, fibrocystic breast condition, and malignant tumors, shown alongside healthy tissue for direct comparison.

Q: How does the model come apart for teaching? A: Both breast halves are held together with magnets for easy separation and reassembly; the right breast divides into 2 parts, and the left breast into 3.

Contact us at sem@semtrainers.com or call +91-88495 63724 for pricing and availability.

TIP: You will also receive access to a **free 3-day trial to all premium features** of the Complete Anatomy app when you sign up for your 3B Smart Anatomy course. This Model of the Female Breast by 3B Scientific® is a truly valuable tool to demonstrate the differences between healthy and unhealthy breast tissue. The set includes a right and a left breast. Both are depicting common diseases like mastitis, fibrocystic breast condition, and malignant tumors. Use this model to teach your students about breast diseases, to educate your patients, and to raise awareness. The high quality of both the material used as well as the medically correct anatomy of the Female Breast Models make it a true 3B Scientific® product and a great educational tool for you. Both models are held together with magnets for easier demonstration. *Lactating right breast:*

- Medially divided into 2 halves
- Healthy lactating breast tissue on the cut surface of the external half
- Breast gland inflammation (mastitis) on the cut surface of the inner half

Non-lactating left breast:

- 2 sagittal cuts, can be separated into 3 parts
- Healthy anatomical structures on the sectional plane of the external half
- Skin on the external half is windowed to view the regional lymph nodes
- Cysts and fibroadenoma on the external sectional plane of the middle breast cut

- Pathological proliferation of the breast connective tissue (fibrocystic breast disease) on the inner sectional plane of the middle breast cut
- Malignant tumors on the sectional plane of the inner breast cut
