SKU:

Categories:Sex Education

Product Description

Trust is one of the core elements of a successful healthcare relationship. It is also one that takes time to build, especially regarding intimate topics. Invest in a long lasting relationship and continued business and utilize education tools to build a strong rapport with your patients. This unique gynecological training model is ideal for demonstration purposes and for training realistic insertions of

female barrier [contraceptive devices](#), which are placed in the vaginal/cervical area. These include:

- Femidom
- FemCap (cervical cap)
- Vaginal ring
- Diaphragm

The second important function of this simulator is that it is possible to insert the various types of [pessaries](#) such as ring, bowl or cube which are used in the event of a prolapse or incontinence. It is also possible to demonstrate how to introduce a IUD (coil) and show where it should be located. The cervical cap can be detected with ultrasound and it is also possible to practice intrauterine insemination (IUI). The transparent vaginal wall allows a view of the inside of the vagina and because the uterus is partially opened up it can be clearly seen how the various devices are inserted. Correct positioning and insertion can be demonstrated and then checked in a teaching scenario, the trainee quickly gains confidence in using the various aids due to a clear representation and simple self-check. This is a very simplified representation of the female pelvis and the female genitalia. **Model for Gynecological Patient Education (3B Scientific) for Sex Education & Clinical Training in India**

The Model for Gynecological Patient Education (Item No. 1013705 [P53], Brand: 3B Scientific) is a versatile gynecological training tool designed for demonstrating realistic insertion of female barrier contraceptive devices — including femidom, FemCap (cervical cap), vaginal ring, and diaphragm — into the vaginal/cervical area.

The same model also supports pessary insertion practice (ring, bowl, or cube types, used for prolapse or incontinence), IUD placement demonstration, and even intrauterine insemination (IUI) practice, since the cervical cap can be detected with ultrasound. The transparent vaginal wall and partially opened uterus let trainees see exactly how each device is positioned, so they can self-check placement and build confidence with each aid through clear visual feedback rather than guesswork. Note: this is a simplified representation of the female pelvis and genitalia, not a full anatomical replica.

Specifications: Dimensions 26 x 19 x 22cm. Weight 1.091kg.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorized distributor of 3B Scientific products in India with over 30 years of experience supplying anatomical models and sex/reproductive health education equipment to 1,500+ institutions across 28 states. We provide pan-India delivery and dedicated after-sales support.

FAQ

Q: What devices can be practiced with this model? A: Female barrier contraceptives (femidom, FemCap, vaginal ring, diaphragm), pessaries (ring, bowl, cube), IUD placement, and IUI technique.

Q: How does the model help trainees self-check their technique? A: The transparent vaginal wall and partially opened uterus give a clear view of device positioning for direct visual feedback.

Q: How do I order from SEM Trainers? A: Contact sem@semtrainers.com or call +91-88495 63724 for pricing and availability.
