Life/form® Left Mediolateral Episiotomy Suturing Simulator

Item No. LF00692
Make: Nasco Healthcare, USA

[Read More](#)

SKU:

Categories: Suturing and Bandaging

Product Description

Now with new lifelike skin for the most realistic suturing practice! This Life/form® simulator provides a realistic way for students to learn good surgical techniques. The simulator provides students with a variety of repair experiences without the constraint of time and concern for safety, which are factors with a live patient. The simulator can be used by the student in a learning lab with an instructor, or by the student individually in the clinical setting just prior to a patient experience. It is also useful as a homework teaching aid that can be signed out at night and returned the next day. In addition to being portable, the lifelike texture allows the learner to develop a “feel” for instrument handling, tension on suture, and the advantages of one method of tying knots over another. The simulator comes with an instruction booklet. Three-year warranty.

Why Choose the Life/form® Left Mediolateral Episiotomy Suturing Simulator for Your Simulation Lab in India?

The Life/form® Left Mediolateral Episiotomy Suturing Simulator (Item No. LF00692) by Nasco Healthcare, USA is a dedicated suturing simulator for the left mediolateral episiotomy incision — the most commonly performed episiotomy direction in obstetric practice in India — with new lifelike skin for the most realistic episiotomy suturing practice available. For midwifery colleges, obstetric nursing training programmes, MBBS clinical skills labs, and NMC-mandated simulation centres that want to train the most clinically prevalent episiotomy repair type on a dedicated single-direction simulator, this is the correct individual unit. Backed by a three-year warranty with a downloadable manual available on the product page.

The simulator provides realistic repair experience without the time constraint and patient safety concerns of live clinical training — enabling students to develop a genuine feel for instrument handling, suture tension, and the advantages of one knot-tying method over another through repeated practice. The simulator can be used in a learning lab with an instructor, individually in the clinical setting immediately prior to a patient experience, or signed out for homework practice and returned the next day. The lifelike skin texture delivers the tactile feedback needed to develop correct surgical technique that transfers to real perineal tissue. The instruction booklet included with the simulator guides trainees through the correct repair sequence for the left mediolateral incision, including layered closure of the episiotomy and any associated vaginal laceration.

For training programmes needing all three episiotomy directions on individual simulators, the Episiotomy Suturing Simulator Set of 3 (LF00690U) bundles this unit with the Midline (W44415) and Right Mediolateral (W44096RM) variants.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorized distributor of Nasco Healthcare products in India with over 30 years of experience supplying medical simulators to 1,500+ institutions across 28 states. We provide pan-India delivery, on-site installation, faculty orientation, and dedicated after-sales support.

Q: Why train specifically on a left mediolateral simulator? A: The left mediolateral episiotomy is the most clinically common episiotomy direction in India. Dedicated single-direction simulators provide more repetitions of the specific incision direction that trainees will encounter most frequently in clinical practice.

Q: Can this simulator be used for self-directed practice? A: Yes. The portable design allows the simulator to be signed out for homework practice and returned the next day — a training delivery model recommended by Nasco Healthcare for midwifery programmes.

Q: What is the warranty and what is included? A: Three-year warranty. The simulator includes an

instruction booklet. A downloadable manual is also available on the product page.
