Categories: Suturing and Bandaging

Product Description

This Life/form® simulator provides a realistic way for students to learn good surgical techniques. The simulator provides students with a variety of repair experiences without the constraint of time and concern for safety, which are factors with a live patient. The simulator can be used by the student in a

learning lab with an instructor, or by the student individually in the clinical setting just prior to a patient experience. It is also useful as a homework teaching aid that can be signed out at night and returned the next day. In addition to being portable, the lifelike texture allows the learner to develop a “feel” for instrument handling, tension on suture, and the advantages of one method of tying knots over another. The simulator comes with an instruction booklet.

Why Choose the Life/form® Midline Episiotomy Suturing Simulator for Your Simulation Lab in India?

The Life/form® Midline Episiotomy Suturing Simulator (Item No. LF00691) by Nasco Healthcare, USA is a 0.801 kg dedicated suturing simulator for the midline episiotomy incision — the straight posterior incision from the vaginal opening toward the anus — providing a realistic, repeatable training environment for suture technique development on the specific anatomy and geometry of the midline repair. For midwifery colleges, obstetric nursing training programmes, and NMC-mandated simulation centres in India that train episiotomy repair across all three incision directions on dedicated individual simulators, this is the Midline component of the Life/form® episiotomy simulator family — also available as part of the Episiotomy Suturing Simulator Set of 3 (LF00690U) with the Left Mediolateral (LF00692) and Right Mediolateral variants. A downloadable manual is available on the product page.

The simulator provides realistic repair experience without the time constraint and patient safety concerns of live clinical training. The lifelike texture allows trainees to develop a genuine feel for instrument handling, suture tension, and knot-tying technique — the tactile skills that transfer to real perineal tissue. The simulator can be used in a learning lab with an instructor, individually in the clinical setting immediately prior to a patient experience, or signed out for homework practice and returned the next day. The simulator comes with an instruction booklet guiding trainees through correct midline repair technique.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorized distributor of Nasco Healthcare products in India with over 30 years of experience supplying medical simulators to 1,500+ institutions across 28 states. We provide pan-India delivery, on-site installation, faculty orientation, and dedicated after-sales support.

Q: What incision direction does this simulator train? A: The midline episiotomy — the straight posterior incision from vaginal opening toward the anus. For the left and right mediolateral directions, see the Episiotomy Suturing Simulator Set of 3 (LF00690U) or individual LF00692 and Right Mediolateral units.

Q: Can this simulator be purchased as part of a set? A: Yes. The Episiotomy Suturing Simulator Set of 3 (LF00690U) bundles this Midline simulator with the Left Mediolateral (LF00692) and Right Mediolateral variants at a lower total cost than purchasing individually.

Q: Is a manual available? A: Yes. A downloadable instruction manual is available on the product page, and an instruction booklet is included with the simulator.
