## Episiotomy Suturing Simulator, Set of 3

Item No. LF00690U

Weight 2.7kg

Dimensions 20 x 15 x 7 cm

Make: Nasco Healthcare, USA

[Read More](#)

**SKU:**

**Categories:** Suturing and Bandaging

## Product Description

Now with new lifelike skin for the most realistic suturing practice! These new and improved Life/form® Episiotomy Suturing Simulators provide a realistic way for students to learn good surgical techniques. The simulators provide students with a variety of repair experiences without the constraint of time and concern for safety, which are factors with a live patient. The simulators can be used by the student in a learning lab with an instructor, or by the student individually in the clinical setting just prior to a patient experience. They are also useful as homework teaching aids that can be signed out at night and returned the next day. In addition to being portable, the lifelike texture allows the learner to develop a "feel" for instrument handling, tension on suture, and the advantages of one method of tying knots over another. Includes one of each simulator: • Midline Suture Simulator (W44415) • Left Mediolateral Suture Simulator (W44416) • Right Mediolateral Suture Simulator (W44096RM) Each simulator comes

with an instruction booklet and is individually boxed.

### **Why Choose the Life/form® Episiotomy Suturing Simulator, Set of 3 for Your Simulation Lab in India?**

The Life/form® Episiotomy Suturing Simulator, Set of 3 (Item No. LF00690U) by Nasco Healthcare, USA is a 2.7 kg, 20 × 15 × 7 cm set of three individual episiotomy suturing simulators — one for each clinical incision direction — with new lifelike skin for the most realistic episiotomy suturing practice available in the Life/form® range. For midwifery colleges, obstetric nursing training programmes, MBBS clinical skills labs, and NMC-mandated simulation centres in India that need to train all three episiotomy repair types on dedicated, anatomically distinct simulators, this set provides one simulator per incision direction: Midline Suture Simulator (W44415), Left Mediolateral Suture Simulator (W44416), and Right Mediolateral Suture Simulator (W44096RM) — each individually boxed with its own instruction booklet.

The simulators provide a realistic variety of repair experiences without the time constraint and patient safety concerns of live clinical training — enabling students to develop a genuine feel for instrument handling, suture tension, and the advantages of one knot-tying method over another through repeated practice sessions. Unlike training on a live patient where each opportunity is singular and pressure is high, these simulators can be used by students in the learning lab under instructor supervision, at a clinical station immediately prior to a patient experience, or signed out for self-directed homework practice and returned the next day — a flexible training delivery model suited to India's high-volume midwifery and obstetrics training programmes. The lifelike skin texture delivers the tactile feedback needed to develop correct surgical technique that transfers to real tissue.

**Why Buy from SEM Trainers?** SEM Trainers & Systems is an authorized distributor of Nasco Healthcare products in India with over 30 years of experience supplying medical simulators to 1,500+ institutions across 28 states. We provide pan-India delivery, on-site installation, faculty orientation, and dedicated after-sales support.

**Q: What three simulators are included in this set?** A: Midline Suture Simulator (W44415), Left Mediolateral Suture Simulator (W44416), and Right Mediolateral Suture Simulator (W44096RM) — each individually boxed with an instruction booklet.

**Q: Can these simulators be used for self-directed practice outside the lab?** A: Yes. The portable design allows simulators to be signed out for homework practice and returned the next day — a training delivery model explicitly recommended by Nasco Healthcare for midwifery programmes.

**Q: How does this set differ from the 3B Scientific Episiotomy and Suturing Trainer (P95)?** A: The P95 trains all three episiotomy types on one model with separate muscle and skin layer suturing. This set provides three dedicated simulators — one per incision direction — for parallel group training where each student works on their own simulator simultaneously.
