Bandaging Simulator with Ostomy

Item No. LF00929U

Weight 8.9kg

Dimensions 84 cm

Make: Nasco Healthcare, USA

[Read More](#)

SKU:

Categories: Suturing and Bandaging

Product Description

This simulator consists of a female torso with flexible, lifelike skin which realistically responds to adhesives and all types of bandaging procedures. 14 different wounds allow one to practice wound management techniques, cleaning and bandaging techniques just like on a real patient. Wound

closures feature surgical staples and sutures which cannot be removed. The simulator is supplied in a carrying case and features the following wounds: • Thyroidectomy • Mid-sternal split with chest tube drains (surgical staples) • Mastectomy with simulated drain • Cholecystectomy with simulated T-tube • Laparotomy (surgical staples) • Appendectomy • Colostomy • Ileostomy • Abdominal hysterectomy (surgical staples) • Thoractomy (surgical staples) • Nephrectomy (surgical staples) • Laminectomy • Sacral decubitus ulcer (stage II) • Leg amputation stump (surgical staples)

Why Choose the Blood Pressure Simulator with iPod® Technology for Your Simulation Lab in India?

The Blood Pressure Simulator with iPod® Technology (Item No. 101-775) by Nasco Healthcare, USA is a 17 lbs. standalone BP training unit that incorporates sphygmomanometer placement, radial pulse palpation, variable systolic and diastolic pressures from 0–300 mmHg in 2 mmHg increments, variable amplitude of Korotkoff sounds at the antecubital site, a sound jack for group listening, auscultatory gap setting, and heart rate settings — the most complete standalone BP parameter control set in the Blood Pressure subcategory. For nursing colleges, NMC-mandated clinical skills labs, and hospital in-service BP training programmes in India that need a self-contained, feature-complete BP training station without attaching to a separate manikin torso, this standalone unit provides the full BP auscultation curriculum on a single portable platform.

The 0–300 mmHg range in 2 mmHg increments gives instructors precise control over the exact pressure values trainees must identify — enabling a structured curriculum that progresses from unambiguous normal values through borderline hypertensive readings to hypotensive presentations, without relying on the limitations of a live volunteer. Variable sound amplitude at the antecubital site lets the instructor control the difficulty of Korotkoff sound identification independently of the pressure setting — simulating the clinical reality that some patients produce clearer Korotkoff sounds than others. The auscultatory gap setting trains trainees to recognise and correctly interpret this clinically important phenomenon. The sound jack enables group listening for classroom demonstration. Battery operated with 110V AC adapter option to conserve batteries during extended classroom sessions. Includes an iPod®, AC adapter and jack, BP cuff, and a carry bag. One-year warranty.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorized distributor of Nasco Healthcare products in India with over 30 years of experience supplying medical simulators to 1,500+ institutions across 28 states. We provide pan-India delivery, on-site installation, faculty orientation, and dedicated after-sales support.

Q: What pressure range does this simulator support? A: 0–300 mmHg in 2 mmHg increments — the widest BP training range in the catalogue, covering hypotensive through severely hypertensive presentations.

Q: Can this unit be used for group classroom demonstration? A: Yes. A sound jack enables group listening through external speakers or headphone splitters.

Q: What is included and what is the warranty? A: iPod®, AC adapter and jack, BP cuff, and carry bag. One-year warranty.
