Skin Suture Trainer

Item No. 1005134 [W19311]

Weight 0.365kg

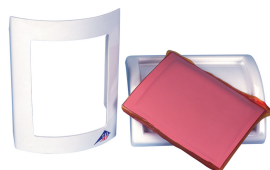

Dimensions 11 x 14 cm

MPN: SSP005

[Read More](#)

SKU:

Categories: Suturing and Bandaging

Product Description

A great low cost way to practice surgical opening and closing techniques. Features: • Economical reversible pad • The material has been designed to make complex incisions such as "flap and dog turn" suturing more realistic • A sub-dermal layer is present so that it is possible to make secure intra-dermal

sutures • Base has suction feet to enable slip free use

Why Choose the Skin Suture Trainer for Your Simulation Lab in India?

The Skin Suture Trainer (Item No. 1005134 / W19311, MPN: SSP005) by Pharmabotics Limited is a 0.365 kg, 11 × 14 cm economical suture practice trainer for surgical opening and closing techniques — designed specifically to enable complex incision and suturing techniques that standard single-layer pads cannot train. For surgical skills training programmes, emergency medicine courses, medical college simulation labs, and NMC-mandated clinical skills labs in India that need a compact, affordable suture trainer capable of training beyond basic interrupted and continuous surface sutures, this trainer delivers intra-dermal suturing capability at a flat-pad price point.

The material has been designed to make complex incisions such as "flap and dog ear" suturing more realistic — techniques that require accurate tissue handling and management of skin edges in two planes, which cannot be practised on a flat single-layer pad. A sub-dermal layer is present within the pad, making it possible to place and close secure intra-dermal (buried) sutures — the suture technique used for cosmetically sensitive wound closures where no suture should be visible at the skin surface. The economical reversible pad doubles the number of suturing sessions per unit — when one side is used, the pad is flipped for continued training. A base with suction feet holds the trainer firmly on the table without slipping during active suturing practice. For replacement pads when the trainer pad is worn, the Double-Sided Skin Pad (1005133 / W19310 / SSP004) is the compatible OEM replacement for this trainer (W19311) and the Surgery Trainer (W19321).

Why Buy from SEM Trainers? SEM Trainers & Systems has over 30 years of experience supplying medical simulators and surgical training instruments to 1,500+ institutions across 28 states in India. We provide pan-India delivery and dedicated after-sales support.

Q: What advanced suturing techniques can be trained on this pad? A: Flap and dog ear suturing, intra-dermal (buried) suturing, and standard surface suturing — the sub-dermal layer enables suture placement at depth that single-layer pads cannot support.

Q: Is the pad reversible? A: Yes — the pad can be flipped for a second usable surface, doubling the training sessions per pad before replacement.

Q: What is the replacement pad for this trainer? A: The Double-Sided Skin Pad (1005133 / W19310 / SSP004) is the compatible OEM replacement for this trainer (W19311) and the Surgery Trainer (W19321).
