Categories: Suturing and Bandaging

Product Description

This is a basic skill trainer which offers a limited facility for knot tying. The foam can be turned over and or replaced. • Highly portable • Rubber suction feet secure the base providing easy working conditions • Washable, durable and all parts replaceable Sutures and string not provided.
Why Choose the Suture Practice Trainer (1005147 / W19324) for Your Simulation Lab in India?

The Suture Practice Trainer (Item No. 1005147 [W19324], MPN: SSB100) is a compact, entry-level knot-tying and suture practice platform designed for introductory surgical skills training where portability, low cost-per-trainee, and ease of maintenance are the primary requirements. At just 0.24 kg and 24 × 22 × 7 cm, it is the most portable trainer in this suturing category — suited to bedside teaching, workshop-style group sessions, take-home trainee kits, and skills lab settings in India where

bench space and storage are limited.

The trainer features a foam suturing surface that can be turned over to present a fresh working face, and the foam itself is replaceable when worn — making this one of the most economical suture trainers available on a cost-per-session basis. Rubber suction feet secure the base firmly to any flat surface during use, providing stable working conditions without the need for clamps or additional fixturing. The unit is washable and all parts are replaceable, supporting repeated use across multiple cohorts without degradation of the training experience. Sutures and string are not included and must be sourced separately.

Why Buy from SEM Trainers?

SEM Trainers & Systems is an authorized distributor of medical simulation products in India with over 30 years of experience supplying medical simulators to 1,500+ institutions across 28 states. We provide pan-India delivery, on-site installation, faculty orientation, and dedicated after-sales support.

Q: What suturing skills can be practised on this trainer? A: The trainer is primarily designed for knot tying and basic suture technique. It is an entry-level platform; for layered tissue simulation, movable anatomy, or pre-formed wound scenarios, higher-specification trainers in this range are recommended.

Q: Are sutures included? A: No. Sutures and string are not included and must be sourced separately.

Q: How is the foam replaced? A: The foam pad can be turned over to present a fresh surface, and replaced entirely when worn. All parts of the trainer are replaceable.

Q: How is the trainer secured during use? A: Rubber suction feet on the underside of the base grip any flat surface to hold the trainer steady during practice without additional fixturing.
