Product Description

Realistic reproduction of a breast made from ultrasound material with two cysts for realistic punctures and aspirations. • Easy to use • Cost effective • Realistic echogenicity The material of the SONOtrain™ trainer simulates the feel of real soft tissue for carrying out palpations and injections and shows realistic texture and echogenicity on ultrasound images. The SONOtrain™ trainer is an excellent teaching tool for basic training and for improving dexterity and hand-eye coordination skills.
Why Choose the SONOtrain™ Breast Model with Cysts for Your Ultrasound Training Programme in India?

The SONOtrain™ Breast Model with Cysts (Item No. 1019634 / P124) by 3B Scientific is a 2 kg realistic breast reproduction built for ultrasound-guided puncture and aspiration practice. For radiology departments, breast imaging units, gynaecology training centres, and sonography schools in India that need a low-cost, repeatable way to train ultrasound-guided breast procedures, this compact model (36 x 36 x 12.5 cm) lets trainees practice on realistic tissue without needing a patient.

The model reproduces a breast using ultrasound-compatible material and contains two cysts, allowing trainees to practice locating, puncturing, and aspirating cystic lesions under ultrasound guidance — a core skill for breast imaging and interventional procedures. The SONOtrain™ material simulates the feel of real soft tissue for both palpation and injection/puncture practice, and reproduces realistic texture and echogenicity under ultrasound imaging, so what trainees see and feel closely matches a real clinical exam. It's an easy-to-use, cost-effective teaching tool, ideal for basic training and for building dexterity and hand-eye coordination with the ultrasound probe and needle. Please note: an ultrasound device is not included with this model.

Why Buy from SEM Trainers?

SEM Trainers & Systems is an authorized distributor of 3B Scientific products in India with over 30 years of experience supplying medical simulators to 1,500+ institutions across 28 states. We provide pan-India delivery, on-site installation, faculty orientation, and dedicated after-sales support.

Q: What procedures can be practiced on this model? A: Ultrasound-guided puncture and aspiration of breast cysts, along with general probe handling and image interpretation.

Q: Does it include an ultrasound machine? A: No. An ultrasound device is not part of the delivery content; this is a scanning/procedure model only.

Q: What are the dimensions and weight? A: 36 x 36 x 12.5 cm, weighing 2 kg.

Please note: an ultrasound device is not part of the delivery content.
