SKU:

Categories: Auscultation

Product Description

Why Choose the Infant Heart & Breath Sound Menu for Your Simulation Lab in India?

The Infant Heart & Breath Sound Menu (Item No. 1018180 / W49428, MPN: ST2M-157, 0.07 kg, 16 × 7 × 2 cm) by Nasco Healthcare, USA is a dedicated 16-sound auscultation menu card for the W49407 auscultation simulator, covering congenital and acquired heart conditions alongside common infant respiratory presentations. Unlike adult-focused sound menus, this card is built specifically around auscultation findings unique to infancy — sounds nursing and MBBS students rarely encounter until clinical postings, by which point misidentifying them on a real infant carries real consequences.

The card's 10 heart sounds cover age-referenced normal findings (7-month and 1-year heart sounds)

alongside the congenital and functional murmurs infant auscultation is built around: Still's murmur, venous hum, split S2, pulmonary stenosis, ASD, VSD, aortic stenosis, and mitral regurgitation — giving students a side-by-side library to distinguish innocent murmurs from pathological ones. The remaining 6 sounds cover infant breath findings: 9-month breath (reference), rhonchi, stridor, asthma, pneumonia, and wheezing — the core respiratory distress presentations infant and pediatric nursing training requires.

For pediatric nursing programmes, NICU/PICU training centres, and NMC-mandated pediatrics skill labs in India already using the W49407 auscultation simulator, this menu card fills the infant-specific gap that general adult sound menus don't cover.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorized distributor of Nasco Healthcare products in India with over 30 years of experience supplying medical simulators and auscultation training accessories to 1,500+ institutions across 28 states. We provide pan-India delivery and dedicated after-sales support.

Q: What age range does "infant" cover on this card? A: The recorded sounds span 7 months to 1 year, consistent with the clinical definition of infancy (birth to 12 months).

Q: Does this distinguish innocent murmurs from pathological ones? A: Yes — the card includes both functional findings (Still's murmur, venous hum, split S2) and pathological congenital lesions (ASD, VSD, pulmonary stenosis, aortic stenosis, mitral regurgitation) so students can compare them directly.

Q: Which simulator is this compatible with? A: The W49407 auscultation simulator.

Infant Heart & Breath Sound Menu - Auscultation Sounds for W49407

1. 7 month heart
2. 1 year heart
3. Stills murmur
4. Venous hum
5. S2 split
6. Pulmonary stenosis
7. ASD
8. VSD
9. Aortic stenosis
10. Mitral regurgitation
11. 9 month breath
12. Rhonchi
13. Stridor
14. Asthma
15. Pneumonia
16. Wheezing
