Pediatric Heart Sound Menu

Item No. 1018179 [W49427]

Weight 0.07kg

Dimensions 16 x 7 x 2 cm

MPN: ST2M-156

[Read More](#)

SKU:

Categories:Auscultation

Product Description

Why Choose the Pediatric Heart Sound Menu for Your Simulation Lab in India?

The Pediatric Heart Sound Menu (Item No. 1018179 / W49427, MPN: ST2M-156, 0.07 kg, 16 × 7 × 2 cm) by Nasco Healthcare, USA is the only card in Nasco's pediatric heart sound series that extends age-progression tracks through adolescence — newborn, 7-month, 1-year, 6-year, and 14-year normal heart sounds — giving students a complete developmental reference from birth through the teenage years, not just early childhood.

The remaining 11 tracks cover congenital and functional heart findings: Still's murmur, venous hum, split S2, split S1, pulmonic stenosis, fixed-split S2 systolic murmur, ASD, VSD, aortic stenosis, and

mitral valve regurgitation — spanning both innocent murmurs students must learn NOT to over-diagnose and the pathological lesions they must recognize. Split S1 in particular appears only on this card within the pediatric heart sound series, making it a useful addition for institutions building a complete pediatric cardiac auscultation curriculum rather than relying on a single card alone.

For pediatric nursing programmes, MBBS clinical skills labs, and NMC-mandated pediatrics training centres in India that need the full birth-to-adolescence age reference alongside congenital lesion recognition, this card is the most developmentally complete option in the series.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorized distributor of Nasco Healthcare products in India with over 30 years of experience supplying medical simulators and auscultation training accessories to 1,500+ institutions across 28 states. We provide pan-India delivery and dedicated after-sales support.

Q: How does this differ from the Infant Heart & Breath Sound Menu (ST2M-157)? A: This card's age-reference tracks extend through 14 years, while the Infant card stays within the first year. Both cards do include some overlapping congenital findings — if you're building out a full auscultation library, compare the two lesion lists before ordering both to avoid redundant content.

Q: What's unique to this card versus the Pediatric Breath & Heart Sound Menu (ST2M-155)? A: This card is heart-focused only and includes split S1, pulmonic stenosis, aortic stenosis, and mitral regurgitation — findings not present on the breath/heart combination card.

Q: Which simulator is this compatible with? A: The W49407 auscultation simulator.

Pediatric Heart Sound Menu - Auscultation Trainer for W49407

1. Newborn
2. 7 month
3. 1 year
4. 6 year
5. 14 year
6. Stills murmur
7. Venous hum
8. Split S2
9. Pulmonic stenosis
10. Systolic, fixed S2
11. Split S1
12. ASD
13. VSD
14. Aortic stenosis
15. Pulmonic stenosis
16. Mitral valve regurgitation
