SKU:

Categories:Auscultation

Product Description

Why Choose the Pediatric Breath & Heart Sound Menu for Your Simulation Lab in India?

The Pediatric Breath & Heart Sound Menu (Item No. 1018178 / W49426, MPN: ST2M-155, 0.07 kg, 16 × 7 × 2 cm) by Nasco Healthcare, USA is compatible with both the W49407 and 1017976 auscultation simulators, and is built around a teaching approach the standalone Infant Heart & Breath Sound Menu (ST2M-157) doesn't cover: **developmental progression**. Rather than presenting a single age group, this card records the same normal heart and breath sounds at newborn, 9-month, and 6-year stages — letting students hear directly how auscultation findings change as a child develops, a distinction textbooks describe but rarely let students hear side by side.

The 16 tracks split into two blocks. **Breath sounds** (tracks 1–9) progress from newborn, 9-month, and 6-year normal breath sounds through pathological findings — crackles/rhonchi, 9-month and neonate stridor, asthma/wheezing, pneumonia, and wheezing — giving students both the developmental baseline and the pathology to compare it against. **Heart sounds** (tracks 10–16) follow the same age-progression logic — newborn, 7-month, 1-year, and 6-year normal heart sounds — before adding pathological findings: systolic murmur, VSD, and split S2.

For pediatric nursing programmes, NICU/PICU training centres, and NMC-mandated pediatrics skill labs in India that need students to recognize how normal findings shift across childhood — not just identify isolated pathology — this card fills a teaching gap the age-specific cards in the series don't cover individually.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorized distributor of Nasco Healthcare products in India with over 30 years of experience supplying medical simulators and auscultation training accessories to 1,500+ institutions across 28 states. We provide pan-India delivery and dedicated after-sales support.

Q: How is this different from the Infant Heart & Breath Sound Menu (ST2M-157)? A: The Infant card focuses on a single age band (7 months–1 year) with a wider variety of congenital lesions. This card spans newborn through 6 years, teaching how normal sounds change developmentally, with fewer but representative pathological findings.

Q: Which simulators is this compatible with? A: The W49407 and 1017976 auscultation simulators.

Q: Does this card cover pathology or only normal development? A: Both — normal age-progression tracks plus pathological findings including crackles, stridor, asthma, pneumonia, systolic murmur, VSD, and split S2.

Pediatric Breath & Heart Sound Menu - Auscultation Trainer for W49407/1017976

1. Newborn breath
2. 9 month breath
3. 6 year breath
4. Crackles, rhonchi
5. 9 month stridor
6. Asthma, wheezing
7. Pneumonia
8. Wheezing
9. Neonate stridor
10. Newborn heart
11. 7 month heart
12. 1 year heart
13. 6 year heart
14. Systolic murmur
15. VSD
16. Split S2
