SKU:

Categories: Auscultation

Product Description

Different base simulator than everything else in this session — worth flagging before this gets miscategorized as compatible with W49407.

[Cert] This card lists compatibility with **W49400**, not the W49407 unit that every other sound menu card in this session (ACLS I/II, Aortic Regurgitation, Acute MI) has been built for. Item No. 1005885 [W49401], weight 0.041 kg, MPN MS2M-141 — note this MPN prefix is "MS2M" rather than the "ST2M" series seen on the W49407-compatible cards, which supports treating this as a genuinely separate product line rather than interchangeable stock.

I disagree with assuming this slots into the same "for W49407" messaging pattern I've used all session.

Here's what I'd do instead: state the W49400 compatibility explicitly and prominently, and don't let it get filed under general "sound menu" copy that implies universal compatibility — a buyer who already owns a W49407 and orders this card based on generic phrasing will end up with a card that doesn't work on their unit.

[Cert] The 16 sounds are all heart-sound focused and clinically coherent for a foundational cardiology auscultation curriculum: apex/base reference points, physiological and pathological S2 splitting patterns (physiological, mid-inspiration, paradoxical, fixed), systolic clicks (mid, mid-late), opening snap, S3, pericardial knock, S4/intermittent, a prosthetic valve sound (Starr-Edwards), and two-component vs. three-component friction rub. [Guessing] The source text has an obvious typo ("Componet") which I've corrected to "Component" rather than treating as ambiguous data.

Also worth a quick check: there's a separate related product on the site called "Basic Heart Sounds Sound Menu" (currently showing a placeholder image) — confirm that's not a duplicate listing of this same SKU under a slightly different name, since that's exactly the kind of duplicate-page problem your memory notes flagged as a recurring SEO issue.

DESCRIPTION (copy-paste into WordPress):

Why Choose Basic Heart Sounds for Your Simulation Lab in India?

Basic Heart Sounds (Item No. 1005885 / W49401, MPN: MS2M-141, 0.041 kg) by Nasco Healthcare, USA is a 16-sound foundational auscultation menu card for the **W49400** simulator — please note this is a different base unit from the W49407 series used by SEM Trainers' ACLS and arrhythmia sound menu cards; confirm which simulator you own before ordering.

The card builds core heart sound recognition skills, starting with apex and base reference points before progressing through the physiological and pathological variations of S2 splitting (physiological, mid-inspiration, paradoxical, and fixed splits) — a foundational skill for distinguishing normal from abnormal cardiac timing. It also covers systolic clicks, opening snap, S3, pericardial knock, S4, a prosthetic heart valve sound (Starr-Edwards), and two- versus three-component pericardial friction rub, giving students a broad first exposure to the heart sounds most commonly tested in undergraduate medical and nursing examinations.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorized distributor of Nasco Healthcare products in India with over 30 years of experience supplying medical simulators and auscultation training accessories to 1,500+ institutions across 28 states. We provide pan-India delivery and dedicated after-sales support.

Q: Which simulator is this compatible with? A: The W49400 simulator by Nasco Healthcare — not the

W49407. Confirm your simulator model before ordering.

Q: What level of training is this suited for? A: This is a foundational heart-sound menu, well suited to undergraduate medical and nursing auscultation curricula.

Q: How do I order from SEM Trainers? A: Contact us at sem@semtrainers.com or call +91-88495 63724 for pricing and availability.

Basic Heart Sounds - Auscultation Sounds for W49400: 1. Apex 2. Base 3. Physiological split S2 4. Split S2-Mid inspiration 5. Paradoxical split S2 6. Fixed split S2 7. Ejection 8. Mid-Systolic click 9. Mid-Late Systolic click 10. Opening snap 11. S3 12. Pericardial knock 13. S4/Intermittent 14. Starr-Edwards valve 15. Friction rub 2-Component 16. Friction rub 3-Component
