Advanced “Airway Larry” Torso with Defibrillation Features, ECG Simulation, and AED Training

Item No. LF03969U
Weight 8kg
Make: Nasco Healthcare, USA

[Read More](#)

SKU:

Categories: Airway Management Adult

Product Description

Includes Life/form® Advanced “Airway Larry” Defibrillation Torso (can be ordered separately upon request), Interactive ECG Simulator (1005666), and Universal AED Trainer (can be ordered upon request). Life/form® Advanced “Airway Larry” Airway Management Trainer is now even better with chest skin that lets you practice defibrillation using standard manual, automatic, or semi-automatic external monitor defibrillators. An internal load box absorbs the full strength of every shock to protect students and equipment. It is also possible to monitor the manikin, just like a real patient, and is compatible with all standard brands and types of defibrillators, monitors, and patient simulators. Features four ECG sites and two defibrillation sites. Perform manual, semi-automatic, and automatic defibrillation. The trainer offers the same great benefits of the standard and advanced models, so your students can practice virtually all of the challenges they may face in the real world. This airway management trainer simulates nonanesthetized patients for practicing intubation, ventilation, suction,

and CPR techniques. Features tongue swelling and laryngospasm. Realistic anatomy and landmarks include teeth, tongue, oral and nasal pharynx, larynx, epiglottis, arytenoids false cords, true vocal cords, trachea, lungs, esophagus, and stomach. Practice oral, digital, and nasal intubation, as well as E.T., E.O.A., P.T.L., L.M.A., E.G.T.A., Combitube®, and King System insertion. Applying pressure to the cricoid and thyroid cartilage changes the position of the trachea and closes the esophagus allowing realistic practice of the Sellick maneuver. Manual carotid pulse. With its slightly anterior position, swelling tongue, and vocal cords, the Advanced "Airway Larry" is a great trainer for introductory and advanced training. Mounted on a CPARLENE® basic torso allows both CPR and airway management procedures to be practiced. Includes pump spray lubricant, disposable lower airway for the manikin, and instruction manual.

Why Choose the Life/form® Advanced "Airway Larry" Torso with Defibrillation Features, ECG Simulation, and AED Training for Your Simulation Lab in India?

The Life/form® Advanced "Airway Larry" Torso with Defibrillation Features, ECG Simulation, and AED Training (Item No. LF03969U) by Nasco Healthcare, USA is an 8 kg complete training bundle combining three components on a single CPARLENE® Basic Torso platform: the Advanced "Airway Larry" Defibrillation Torso, the Interactive ECG Simulator (1005666), and the Universal AED Trainer. Each component is also available separately on request. This is the most complete Life/form® adult airway management training platform — the only configuration in the Airway Larry family that combines advanced airway management, defibrillation capability, integrated ECG rhythm training, and AED training on one manikin, enabling simulation labs in India to run combined ACLS airway, rhythm recognition, cardioversion, and AED operator training sessions without multiple separate platforms.

The defibrillation chest skin is the upgrade that separates this torso from the standard Advanced Airway Larry configurations — it accepts full-strength defibrillation shocks from any standard manual, semi-automatic, or automatic external monitor defibrillator brand, with an internal load box protecting both trainees and equipment from discharge energy. Four ECG monitoring sites and two defibrillation pad sites replicate the clinical placement geometry trainees must learn for real patient defibrillation. The Interactive ECG Simulator (1005666) connects through the torso's built-in circuitry to generate 17 adult and paediatric ECG rhythms on any standard cardiac monitor, enabling rhythm recognition and arrhythmia training within the same session as airway management practice. The Universal AED Trainer enables AED operator training using the correct device workflow — pad placement, device activation, shock delivery — without real defibrillation energy. The Advanced Airway Larry head retains all capabilities from the comparison table: laryngospasm and tongue oedema for difficult airway simulation, digital, oral, and nasal intubation, ET, EOA, PTL, LMA, EGTA, Combitube®, and King Systems device insertion, Sellick manoeuvre simulation via cricoid and thyroid cartilage pressure, manual carotid pulse, and full anatomical landmark set. The CPARLENE® Basic Torso mount enables CPR training alongside airway management.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorized distributor of Nasco

Healthcare products in India with over 30 years of experience supplying medical simulators to 1,500+ institutions across 28 states. We provide pan-India delivery, on-site installation, ECG Simulator setup and faculty orientation, and dedicated after-sales support. All products carry genuine manufacturer warranty and meet ISO 9001 quality standards.

Frequently Asked Questions

Q: Can the three components in this bundle be ordered separately? A: Yes. The Advanced Airway Larry Defibrillation Torso, the Interactive ECG Simulator (1005666), and the Universal AED Trainer can each be ordered separately upon request. Contact us at sem@semtrainers.com or +91-88495 63724.

Q: Which defibrillator brands are compatible with this trainer? A: The defibrillation chest skin and internal load box are compatible with all standard manual, semi-automatic, and automatic external monitor defibrillator brands. No brand-specific adapters are required for defibrillation training.

Q: What is the warranty and how do I get support? A: All Nasco Healthcare products carry standard manufacturer warranty. For support, reach us at sem@semtrainers.com or call +91-88495 63724.
