Product Description

This manikin of a newborn allows Coast Guards, Lifeguard Trainers and Emergency Personnel to train water rescue and retrieval. When filled with water the manikin has a weight of 3.2 kg and will sink to the bottom.

Clean and unremarkable — no dimensions field, but unlike the Infant manikin, it's simply *absent* rather than falsely set to 0x0x0. That's the correct way to handle missing data; consistent with the Newborn/Child pattern. No flags here.

DESCRIPTION (copy-paste into WordPress):

Newborn Water Rescue Manikin (Nasco Healthcare) for Lifeguard & Emergency

Rescue Training in India

The Newborn Water Rescue Manikin (Item No. 149-1350U, Brand: Nasco Healthcare, USA) represents a newborn infant, giving Coast Guards, lifeguard trainers, and emergency personnel the smallest and most delicate subject in the water rescue training range to practice on.

Dry weight is 1.3 kg; when filled with water, the manikin reaches approximately 3.2 kg and sinks to the bottom, allowing trainers to simulate full-submersion newborn rescue drills — a scenario that demands especially careful handling technique.

Specifications: Weight (dry) 1.3 kg; weight (filled with water) approx. 3.2 kg. Brand: Nasco Healthcare, USA.
