SKU:

Categories:ALS Adult

Product Description

With the SimPad SkillReporter, you can control up to 6 models wirelessly. When used with the AED and CPR-D models, you can control the heart rate and entire scenarios. This operates wirelessly too, of course. As a teacher, you will see at a glance which trainees are having problems carrying out CPR. The SimPad SkillReporter is the ultimate tool for measuring, assessing and improving CPR performance. The easy-to-operate SimPad SkillReporter software offers a wide range of feedback for high quality CPR training. All important CPR data is measured. The software provides real-time feedback, saves data, and calculates the overall performance, thereby enabling a thorough debriefing. Detailed real-time feedback and a broader range of debriefing options enable the trainees to learn and improve their CPR skills far more effectively than has been possible until now. The following [models](#) are compatible with the SimPad SkillReporter (sold separately): ResusciAnne QCPR Torso 1017683 and Full Body 1017691 (incl. QCPR AED 1017760 + 1017761 and QCPR Defibrillation 1017762 + 1017763) and Resusci Baby QCPR 1017684 (via a USB cable only) Functions

- real-time feedback on CPR performance
- remote control for AED trainers (via the Laerdal Link System)
- the possibility of controlling the heart rate for use with defibrillators
- training in evaluation mode (without real-time feedback if desired)
- detailed evaluations for debriefing
- overview of the improvement in performance
- notes on important events during the CPR simulation
- multi-model overview for group training
- adjustable values for compression and respiration (incl. preset ERC / AHA guidelines)
- project data transfer to PC, printing and external saving with the free session viewer

Characteristics:

- the SimPad is a control device specially developed for the needs of simulation and CPR training
- wireless connection with the ResusciAnne QCPR
- USB connection to the ResusciAnne QCPR and to the ResusciBaby QCPR also possible
- 4 hour battery autonomy; quick-charge facility
- simple data transfer to the PC
- connection with a router possible
- easy to set up and use

Why Choose the SimPad SkillReporter for Your Simulation Lab in India?

The SimPad SkillReporter (Item No. 1017707, MPN: 202-30033) is a dedicated wireless CPR training

controller and performance reporting system weighing 1.262 kg, purpose-built for simulation and CPR training environments. It wirelessly controls up to 6 compatible QCPR manikin models simultaneously — enabling instructors to manage group CPR training sessions from a single handheld device, monitor all trainees in real time, and identify immediately which trainees are struggling with compression depth, rate, or ventilation without having to walk the room. For BLS and ACLS certification programmes in India that train multiple trainees concurrently, this multi-model wireless management capability significantly increases training efficiency and instructor oversight.

The SimPad SkillReporter measures all critical CPR parameters in real time — compression depth, compression rate, ventilation rate, ventilation volume, hand position, chest recoil, and no-flow time — and displays live feedback on its dedicated screen. When used with compatible AED and CPR-D models, instructors can also control heart rate and run full cardiac arrest scenarios wirelessly from the SimPad. Training can be conducted in evaluation mode with real-time feedback visible to trainees, or with feedback suppressed to assess performance under realistic conditions. At the end of each session the SimPad calculates overall performance scores, generates detailed evaluations for structured debriefing, tracks improvement over time, and allows event annotations during the scenario. Session data transfers to PC via the free Session Viewer software for printing, archiving, and competency portfolio management. Battery life is 4 hours per charge with a quick-charge facility. Compatible manikins (sold separately) include the ResusciAnne QCPR Torso (1017683), ResusciAnne QCPR Full Body (1017691), and related QCPR AED and defibrillation configurations; ResusciBaby QCPR (1017684) connects via USB cable.

Why Buy from SEM Trainers? SEM Trainers & Systems has over 30 years of experience supplying medical simulation equipment to 1,500+ institutions across 28 states. We provide pan-India delivery, on-site setup and demonstration, and dedicated after-sales support.

Frequently Asked Questions

Q: How many manikins can the SimPad SkillReporter control simultaneously? A: The SimPad SkillReporter wirelessly controls up to 6 compatible QCPR manikin models simultaneously, enabling group CPR training with full multi-trainee monitoring from a single device.

Q: Is the SimPad SkillReporter compatible with all CPR manikins? A: No. It is designed for use with compatible QCPR manikins — including ResusciAnne QCPR Torso (1017683), Full Body (1017691), and ResusciBaby QCPR (1017684, USB only). Confirm compatibility with your existing manikins before ordering: sem@semtrainers.com or +91-88495 63724.

Q: What is the battery life and how do I transfer session data? A: The SimPad provides 4 hours of battery autonomy with a quick-charge facility. Session data transfers to PC via the free Session Viewer software for printing, editing, and archiving.
