Product Description

Realism in pediatric training that is also affordable. STAT Baby brings you the most lifelike simulator for infant care by utilizing new materials for tactile awareness during patient assessment. Developed in conjunction with leading pediatric physician involvement, this baby contains a wide range of skill sets in a simple format. The infant is sized to a 9-month-old and weighs 18 lbs. The size, heft, and feel of this child stirs the emotions when you pick it up. Features:

- Intraosseous leg
- Peripheral IV sites on hand and foot
- Intramuscular and subcutaneous injection sites
- Bilateral chest tube insertion

- PICC line
- ET tube insertion
- Tongue edema and laryngospasm
- LMA insertion
- NG tube placement with fluid reservoir
- Feeding tube care
- Rectal medication
- Six pulse locations (two brachial, two femoral, two carotid)
- Defibrillation with shock level of 2-4 joules per kg
- Foley catheter insertion (female)
- Pneumothorax

The Stat Baby is supplied with accessories that include IV vein kit (one arm and one leg), leg skin, arm skin, 12 IO leg bones, four pneumothorax sites, two injection sites, one PICC line site, four reservoir bags, defibrillator adapters, interactive ECG simulator, simulated blood powder, and carry bag.

Why Choose the STAT Baby Basic for Your Simulation Lab in India?

The STAT Baby Basic (Item No. 101-350U) by Nasco Healthcare, USA is a 9-month-old infant simulator weighing 12.25 kg, developed in conjunction with leading paediatric physicians to deliver the widest procedural skill set available in an affordable standalone infant training platform. Its lifelike new skin material — designed specifically for tactile awareness during patient assessment — creates a realistic handling experience that stirs accurate clinical instincts from the first pickup. For NMC-mandated simulation labs, NICU in-service training departments, paediatric nursing programmes, and medical colleges in India that need a single infant manikin covering the full range of post-neonatal care skills without the iPad® controller cost of the STAT Baby Advanced, this is the correct starting point.

The procedural capability set is comprehensive: intraosseous leg with 12 IO leg bones included; peripheral IV sites on hand and foot with IV vein kit (arm and leg), arm skin, and leg skin included; IM and subcutaneous injection sites with two injection site consumables included; PICC line access with one PICC site included; ET tube insertion with tongue oedema and laryngospasm simulation; LMA insertion; bilateral chest tube insertion; NG tube placement with fluid reservoir; feeding tube care; rectal medication administration; Foley catheter insertion (female); pneumothorax simulation with four pneumothorax sites included; six pulse locations (two brachial, two femoral, two carotid); and defibrillation at 2–4 joules per kg with defibrillator adapters and an interactive ECG simulator included as standard. Four reservoir bags and simulated blood powder complete the accessories pack. The entire kit ships in a carry bag. Unlike the STAT Baby Advanced, there is no iPad® controller, no spontaneous breathing, and no instructor-controlled heart, lung, or voice sounds — the STAT Baby Basic is a static procedural trainer, not a scenario platform. That makes it the right choice for skills labs focused on procedural competency development where instructor-driven physiological scenario control is not a training requirement.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorized distributor of Nasco Healthcare products in India with over 30 years of experience supplying medical simulators to 1,500+ institutions across 28 states. We provide pan-India delivery, on-site installation, faculty orientation, and dedicated after-sales support. All products carry genuine manufacturer warranty and meet ISO 9001 quality standards.

Frequently Asked Questions

Q: What patient age does the STAT Baby Basic simulate? A: The STAT Baby Basic simulates a 9-month-old infant, weighing 18 lbs in patient weight. The simulator itself weighs 12.25 kg with accessories.

Q: What is the difference between the STAT Baby Basic and the STAT Baby Advanced (101-8010U)? A: The STAT Baby Advanced adds iPad® instructor control, spontaneous breathing, heart sounds, lung sounds, voice sounds, sternal retraction, a fully enclosed crib with waterproof surface, a 6 ft. tether assembly, and aneroid blood pressure cuff. The STAT Baby Basic has the same complete procedural skill set but operates as a static trainer without instructor-controlled physiological parameters.

Q: What accessories are included as standard? A: IV vein kit (one arm and one leg), leg skin, arm skin, 12 IO leg bones, four pneumothorax sites, two injection sites, one PICC line site, four reservoir bags, defibrillator adapters, interactive ECG simulator, simulated blood powder, and carry bag.
