SKU:

Categories:BLS Adult

Product Description

What do rescuers do when they can't place their arms around the circumference of a choking adult? Now you've found the manikin to train this important skill! This addition to the Choker family increases the selection of the tools to teach proper hand placement, effective abdominal thrusts, and protocols for working with pregnant or older, heavier victims of airway obstruction. Anatomical features are limited, just as in overweight adults. The navel is present; the rib cage remains hidden by the excess fatty tissue over the abdomen and pectorals, or, as is the case with advanced pregnancy, the swollen abdomen and breasts. Perform the procedure correctly and this Obese Mature Choker functions by expelling the obstruction. Soft carry bag included.

Item No. 1005684 [W44232], 8 kg, MPN 100-1630U / PP01630U / SB38638U, Nasco Healthcare, USA

— Make field absent. Companion product to Overweight Fred (W44233, CPR) — this is the choking-specific variant in the same "Choker family." Dual-purpose design covers both obese and late-pregnancy abdominal thrust training, since both presentations share the same anatomical training challenge: standard hand placement landmarks are obscured.

DESCRIPTION (copy-paste into WordPress product description):

Why Choose the Obese Mature Choking Manikin for Your Simulation Lab in India?

The Obese Mature Choking Manikin (Item No. 1005684 / W44232, MPN: 100-1630U / PP01630U / SB38638U) by Nasco Healthcare, USA is an 8 kg specialised choking response trainer that answers a question standard choking manikins can't: what do rescuers do when they can't place their arms around the circumference of a choking adult? For BLS certification centres, paramedic training programmes, and hospital in-service programmes in India, this addition to the Choker family expands the skill set beyond standard-build adults to teach proper hand placement, effective abdominal thrusts, and response protocols specifically for pregnant or older, heavier choking victims — a patient presentation that real-world responders encounter regularly but rarely train for.

Anatomical features are deliberately limited, matching the reality of an overweight or late-pregnancy patient: the navel remains present as a landmark, but the rib cage is hidden by excess fatty tissue over the abdomen and pectorals, or by the swollen abdomen and breasts characteristic of advanced pregnancy — training rescuers to locate correct hand placement without the surface landmarks a standard manikin provides. When the abdominal thrust procedure is performed correctly, the Obese Mature Choker functions by expelling the obstruction, giving trainees the same clear pass/fail feedback as standard choking manikins, just on a more physically demanding and clinically realistic patient body type. A soft carry bag is included for storage and transport between training venues.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorized distributor of Nasco Healthcare products in India with over 30 years of experience supplying medical simulators to 1,500+ institutions across 28 states. We provide pan-India delivery, on-site installation, faculty orientation, and dedicated after-sales support.

Frequently Asked Questions

Q: What patient presentations does this manikin train for? A: Obese adults and patients in advanced pregnancy — both presentations where standard arm-around-the-waist abdominal thrust technique doesn't apply, and where rib cage landmarks are obscured by excess tissue.

Q: How does the manikin confirm correct technique? A: When the abdominal thrust procedure is

performed correctly, the manikin expels the obstruction — providing clear, unambiguous pass/fail feedback.

Q: What is included? A: A soft carry bag for storage and transport.
