SKU:

Categories:BLS Adult

Product Description

Completely blank description, placeholder image. Item No. 1020260, 7 kg, MPN 100-2861U / PP02861U / SB33218U, Nasco Healthcare, USA — Make field absent. No dimensions field. This is the female-presenting equivalent of the standard adult CPR torso — directly analogous to the PRESTAN Female Accessory done earlier, but here it's a complete dedicated torso rather than an add-on accessory. Same clinical training rationale applies: female-patient CPR hesitation is a documented bystander gap.

DESCRIPTION (copy-paste into WordPress product description):

Why Choose the Adult Female CPR Torso with Bag for Your Simulation Lab in India?

The Adult Female CPR Torso with Bag (Item No. 1020260, MPN: 100-2861U / PP02861U / SB33218U) by Nasco Healthcare, USA is a 7 kg female-presenting adult CPR training torso, supplied with a carrying bag for storage and transport. For BLS certification centres, nursing colleges, hospital in-service programmes, and corporate first-aid training programmes in India that want to make female-patient CPR an explicit, deliberate part of the curriculum, this torso provides the correct platform — research consistently shows bystanders are less likely to perform CPR on women than men, with documented hesitation linked to differences in chest presentation and cultural discomfort with touching a woman's chest in an emergency.

Training on a female-presenting torso gives instructors the opportunity to identify and correct this hesitation in a controlled training environment, before a trainee encounters it in a real emergency where the delay could cost a life. The female anatomical presentation does not compromise the core CPR training mechanics — correct hand placement, compression depth, and rescue breathing technique are trained identically to a standard adult torso, with the only difference being the patient presentation trainees must overcome hesitation toward. The included carrying bag makes the torso practical for outreach training programmes and multi-venue BLS certification courses across India, where equipment needs to travel between training sites.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorized distributor of Nasco Healthcare products in India with over 30 years of experience supplying medical simulators to 1,500+ institutions across 28 states. We provide pan-India delivery, on-site installation, faculty orientation, and dedicated after-sales support. All products carry genuine manufacturer warranty and meet ISO 9001 quality standards.

Frequently Asked Questions

Q: Why include a female-presenting torso in CPR training? A: Research shows bystanders are significantly less likely to perform CPR on female patients than male patients. Training on a female-presenting torso allows instructors to identify and address this hesitation deliberately, before it becomes a real-world delay in an emergency.

Q: Does the CPR training mechanics differ from a standard adult torso? A: No. Correct hand placement, compression depth, and rescue breathing technique are trained identically — the difference is the patient presentation, which is the specific training value this torso adds.

Q: What is included? A: The torso and a carrying bag for storage and transport between training venues.
