SKU:

Categories:BLS Newborn

Product Description

• Full-Body Infant Manikin with Proper Landmarks to Realistically Practice CPR Techniques • Sanitary One-Piece Lung/Mouth Protection System • Economical - Each Student Can Have Their Own Manikin • Low-Cost Disposable Lung/Mouth Bags - No Messy Cleanup • Lung/Mouth Bag Installs Easily (Tool Included) • Removable Chest for Easy Lung/Mouth Bag Installation • Visible Chest Rise When Ventilated • Lightweight and Easily Transported • Rugged Carrying Bag Included • Five Baby Buddy™ Manikins Easily Fit in Carry Bag

Consists of five infant manikins, 50 lung/mouth protection bags, carrying bag, five lung insertion tools, and an instruction manual. NOTE: Only use AED pads designed for foam body manikins.

The **Baby Buddy™ 5-Pack (Item No. LF03721U)** by Nasco Healthcare, USA is a value-priced infant CPR manikin pack designed for high-volume neonatal and infant BLS training. With five full-body infant

manikins packaged together in a single rugged carry bag — along with 50 disposable lung/mouth protection bags — this pack allows every student in a group to have their own dedicated manikin, eliminating wait times, cross-contamination risk, and the need for sanitisation between uses. It is the most cost-effective way to equip a paediatric or neonatal BLS training cohort in India.

Key Features:

- **5 full-body infant manikins** — realistic infant body form with proper anatomical landmarks for correct hand placement and CPR technique practice
- **Sanitary one-piece lung/mouth protection system** — completely eliminates cross-contamination risk; no cleaning or sanitisation required between students
- **50 disposable lung/mouth protection bags included** — 10 bags per manikin; sufficient for multiple training sessions before reorder
- **Removable chest panel** — quick, easy lung/mouth bag installation and replacement between students
- **Visible chest rise on ventilation** — provides immediate visual confirmation of correct rescue breath delivery
- **Proper CPR landmarks** — anatomically correct markers guide accurate two-finger compression placement for infant CPR technique
- **AED training compatible** — note: use only AED pads designed for foam body manikins
- **5 lung insertion tools included** — one per manikin for hygienic, tool-assisted bag installation
- **Rugged carry bag included** — all 5 manikins fit together in the single carry bag for easy storage and transport between rooms or venues
- **Instruction manual included**
- **Lightweight** — 11 kg for the complete 5-pack; approximately 2.2 kg per manikin

Ideal For:

- NMC/INC-compliant neonatal and infant BLS skills stations in medical colleges and nursing institutes
- Paediatric nursing, midwifery, and neonatal care training programmes
- PALS (Paediatric Advanced Life Support) and NRP (Neonatal Resuscitation Programme) foundation training
- Large-group infant CPR training where one-manikin-per-student eliminates queue time and maximises practice repetitions per session
- AYUSH institutions with paediatric and neonatal simulation requirements
- Skills labs needing an economical, high-throughput infant manikin solution

Specification

Detail

Item No.	LF03721U
Make	Nasco Healthcare, USA

Specification	Detail
Pack Contents	5 infant manikins
Weight	11 kg (complete 5-pack)
Lung/Mouth Bags	50 disposable (10 per manikin)
Insertion Tools	5 (one per manikin)
AED Compatible	Yes – foam manikin pads only
Carry Bag	1 (fits all 5 manikins)

Q: What age patient does the Baby Buddy™ manikin simulate? A: It simulates a full-body infant, appropriate for neonatal and infant CPR training covering the two-finger chest compression technique, correct hand placement landmarks, and rescue breathing.

Q: Why is a 5-pack more effective than a single manikin for group training? A: With one manikin per student, every trainee gets maximum hands-on practice time without waiting. Research consistently shows that compression quality and retention improves with individual practice repetitions. In a class of 20 students, 4 packs of 5 gives every student their own manikin simultaneously — transforming BLS training efficiency.

Q: Is this manikin hygienic for group training? A: Yes. The one-piece disposable lung/mouth protection bag is replaced between students — completely eliminating cross-contamination risk without any sanitisation of the manikin itself. The removable chest panel makes bag replacement quick and straightforward.

Q: Can this be used with AED training? A: Yes, with an important caveat — only AED training pads specifically designed for foam body manikins should be used. Standard electrode training pads may not be compatible with the foam body construction.

Q: How many training sessions will the included bags last? A: The pack includes 50 bags (10 per manikin). For a class of 20 students using 2 packs, this covers 5 complete group sessions before replacement bags need to be ordered.

Q: Are replacement lung/mouth protection bags available? A: Yes. Replacement disposable lung/mouth bags for the Baby Buddy™ manikin are available as a consumable — contact SEM Trainers to order.

Q: Is this suitable for NMC-compliant neonatal BLS skills labs? A: Yes. The Baby Buddy™ 5-Pack fulfils the infant CPR manikin requirements for NMC-compliant paediatric and neonatal BLS skills stations in medical college and nursing institute simulation labs.

Q: Can all 5 manikins be stored and transported together? A: Yes. All 5 manikins fit inside the included rugged carry bag, making the complete pack easy to move between training rooms, venues,

or storage locations.
