AirSim Child X

Item No.	1021549 [W47406C]
Weight	2.568kg
Dimensions	40 x 24 x 22 cm
MPN:	AC10006X

SKU:

Categories:BLS Child

Product Description

The AirSim Child Bronchi X, based on a 6 year old, features the AirSim pediatric airway, nasal passage and internal anatomical detail down to the 4th generation bronchi facilitating full airway management

and bronchoscopy techniques. Features include:

- AirSim® Pediatric Airway
- Realistic feedback during bag/mask ventilation, supraglottic airway insertion and both naso- and orotreacheal intubation
- Lifelike external and internal anatomical features allow for easy and successful demonstration of all pediatric video laryngoscopes (VL)
- Inflatable tongue bulb to simulate tongue edema
- Missing front teeth resemble natural dentals of a six year old child
- Real feel' skin covering for added realism during airway management procedure training

The AirSim Child X will provide a solution to your training needs in:

- Direct and video laryngoscopy
- Endo and naso tracheal tube insertion
- Supraglottic device insertion
- Bag mask ventilation
- Fibre optic bronchoscopy techniques
- Lung isolation techniques
- Lung suctioning
- Diagnostic bronchoscopy

Product components:

- 1 Carrier case
- 1 USB pen drive user manual
- 1 Bottle of lubrication
- 3 Child lung bags replicating 2 lungs and stomach

Why Choose the TruCorp AirSim® Child Bronchi X for Your Simulation Lab in India?

The TruCorp AirSim® Child Bronchi X (Item No. 1021549 / W47406C, MPN: AC10006X) by TruCorp®, Ireland is a 2.568 kg, 40 × 24 × 22 cm paediatric airway and bronchoscopy training platform based on a 6-year-old patient — the only TruCorp paediatric model with internal anatomical detail down to the 4th generation bronchi, enabling fibre optic bronchoscopy, lung isolation, lung suctioning, and diagnostic bronchoscopy training alongside the full standard paediatric airway management procedure set. The missing front teeth replicate the natural dentition of a 6-year-old child — a realism detail that distinguishes paediatric intubation geometry from adult anatomy in a way trainees feel during laryngoscopy. For paediatric anaesthesia departments, paediatric pulmonology training programmes, PICU in-service skills labs, and NMC-mandated simulation labs in India that need to train both standard paediatric airway management and paediatric bronchoscopy techniques on the same platform, this is the correct and only TruCorp paediatric option with that combined

capability.

The AirSim® paediatric airway provides realistic feedback during BVM ventilation, supraglottic airway insertion, and both naso- and orotracheal intubation, with lifelike external and internal anatomical features that support all paediatric video laryngoscope (VL) models for easy and successful demonstration. The inflatable tongue bulb simulates tongue oedema for difficult airway training. The nasal passage enables nasotracheal intubation training with correct turbinate anatomy. The bronchi extend to the 4th generation — the anatomical depth required for selective lobar intubation, lung isolation technique, diagnostic bronchoscopy, and therapeutic bronchoscopy training. Three child lung bags (representing two lungs and a stomach) provide visible inflation confirmation and oesophageal intubation consequence feedback. Package includes: carrier case, USB pen drive user manual, lubricant, and 3 child lung bags.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorized distributor of TruCorp® products in India with over 30 years of experience supplying medical simulators to 1,500+ institutions across 28 states. We provide pan-India delivery, on-site installation, faculty orientation, and dedicated after-sales support. All products carry genuine manufacturer warranty and meet ISO 9001 quality standards.

Frequently Asked Questions

Q: What is the difference between the AirSim® Child Bronchi X and the AirSim® Child Combo X (CC10006X)? A: The Child Bronchi X adds 4th generation bronchi for bronchoscopy training (fibre optic, diagnostic, lung isolation) but does not include FONA capability. The Child Combo X adds paediatric FONA (needle and surgical cricothyroidotomy, percutaneous tracheostomy) but does not extend to bronchoscopy depth. Choose Bronchi X for bronchoscopy programmes; choose Combo X for FONA and surgical airway training.

Q: What age patient does this trainer simulate? A: The AirSim® Child Bronchi X is based on a 6-year-old patient, including missing front teeth that replicate natural dentition at that age.

Q: What is the warranty and how do I get support? A: TruCorp® products carry a manufacturer warranty. For support in India, contact SEM Trainers at sem@semtrainers.com or +91-88495 63724.

Manikin can be used with Supraglottic airway devices for airway training.
