CPR-Torso Brad™ Junior with Electronics, 7-year old

Item No. 1018850
Weight 6.5kg
MPN: 100-2275U / PP02275U / SB33576U

[Read More](#)**SKU:****Categories:**BLS Child

Product Description

Brad Jr.'s realistic appearance, accurate anatomical landmarks, and individual-use mouth/nosepieces with disposable airway/lung system and non-rebreathing valve combine for function, durability, and ease of use. Approximate age: 7 years.

Why Choose the CPR-Torso Brad™ Junior with Electronics, 7-Year-Old for Your Simulation Lab in India?

The CPR-Torso Brad™ Junior with Electronics, 7-Year-Old (Item No. 1018850, MPN: 100-2275U / PP02275U / SB33576U) by Nasco Healthcare, USA is a 6.5 kg child CPR training torso — the only configuration in the 6-model BLS Child family with an integrated electronics system providing real-time feedback on hand position, compression depth, and ventilation simultaneously. From the comparison table: CPR ?, disposable airway ?, electronics feedback system ? — no arterial pulse sites, no OMNI®, no IO, no femoral venous. For PALS training centres, paediatric nursing institutes, BLS certification centres, and NMC-mandated simulation labs in India that need real-time electronic feedback on all three CPR quality parameters — hand placement, compression depth, and ventilation effectiveness — on a 7-year-old child patient torso, this is the only platform in the BLS Child range with that complete feedback set.

The 7-year-old patient age is the only configuration in the BLS Child family at that age — all other configurations simulate a 5-year-old — positioning trainees correctly for the two-handed chest compression technique required for older school-age children, with the torso proportions and sternal landmarks correct for that patient age. The electronics system with feedback indicates both correct hand position and adequate depth of compression and ventilation via a light signal — providing trainers with a passive monitoring tool that identifies incorrect technique in real time without requiring continuous hands-on correction. The individual-use mouth/nose pieces with disposable airway/lung system and non-rebreathing valve maintain hygienic airway practice across multiple trainees per session. The realistic appearance and accurate anatomical landmarks of the Brad Jr. platform — established in the earlier Brad Jr. without electronics (100-2271) — are retained, combined with the electronics feedback module.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorized distributor of Nasco Healthcare products in India with over 30 years of experience supplying medical simulators to 1,500+ institutions across 28 states. We provide pan-India delivery, on-site installation, faculty orientation, and dedicated after-sales support. All products carry genuine manufacturer warranty and meet ISO 9001 quality standards.

Frequently Asked Questions

Q: What feedback does the electronics system provide? A: The system provides light-signal feedback indicating correct hand position and adequate depth of both chest compressions and ventilation — covering all three CPR quality parameters simultaneously.

Q: How does this differ from the Brad Jr. without electronics (100-2271)? A: The feature set and 7-year-old patient proportions are identical. The 1018850 adds the electronics feedback system for real-time hand position and depth confirmation. The 100-2271 is the same torso without electronics at lower cost.

Q: What is the warranty and how do I get support? A: All Nasco Healthcare products carry standard manufacturer warranty. For support, reach us at sem@semtrainers.com or call +91-88495 63724.
