SKU:

Categories: Airway Management Child

Product Description

A simulated head of an 5-year-old child featuring realistic size and anatomy. Perfect for practicing airway management skills on pediatric patients. Realistic anatomy includes mouth, tongue, oral pharynx, larynx, epiglottis, vocal cords, trachea, and esophagus much like that of the Life/form® Child Airway Management Trainer Head (can be ordered on request). This trainer also offers tongue edema and laryngospasm features. Separate lungs can be added for auscultation. Practice suctioning and oral, nasal, and intubation techniques. Can be attached to any of the Child Airway Management Trainers or Child CRiSis™ Manikins. Lungs and stomach not included. Pump spray lubricant included. Manual carotid pulse.

Why Choose the Life/form® Advanced Child Airway Management Trainer Head Only for Your

Simulation Lab in India?

The Life/form® Advanced Child Airway Management Trainer, Head Only (Item No. LF03593U / 1019787) by Nasco Healthcare, USA is a 1.7 kg advanced paediatric airway training head simulating a 5-year-old child — designed to attach directly to any Life/form® Child Airway Management Trainer or Child CRiSis™ Manikin, enabling simulation labs that already own those platforms to upgrade to difficult airway training capability without purchasing a complete new trainer. From the comparison table, this is the only head-only configuration in the child airway range that combines tongue oedema, laryngospasm, suctioning, and manual carotid pulse — making it the correct upgrade for programmes that need to add CICO and difficult airway scenarios to an existing standard child airway platform. Lungs and stomach are not included and must be ordered separately; pump spray lubricant is included. A downloadable user manual is available on the product page.

The tongue oedema and laryngospasm features are instructor-activated — enabling the instructor to present a suddenly deteriorating paediatric airway at any point in a training scenario, requiring trainees to escalate their management technique in response. The manual carotid pulse enables integrated pulse assessment within the paediatric airway management sequence. The anatomical landmark set covers mouth, tongue, oral pharynx, larynx, epiglottis, vocal cords, trachea, and oesophagus — the complete landmark set for oral, nasal, and ET intubation technique training. Suctioning technique training is supported. Separate lungs can be added (ordered separately) for auscultation-based tube placement confirmation. The absence of stomach rise distinguishes this head from the board-mounted LF03762 — if stomach distension feedback for oesophageal intubation training is a programme requirement, the complete LF03762 board-mounted trainer is the appropriate choice. For labs upgrading an existing Child CRiSis™ or child airway trainer platform, this head is the correct and most cost-effective difficult airway upgrade path.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorized distributor of Nasco Healthcare products in India with over 30 years of experience supplying medical simulators to 1,500+ institutions across 28 states. We provide pan-India delivery, on-site installation, faculty orientation, and dedicated after-sales support. All products carry genuine manufacturer warranty and meet ISO 9001 quality standards.

Frequently Asked Questions

Q: Which manikins is this head compatible with? A: LF03593U can be attached to any Life/form® Child Airway Management Trainer or Life/form® Child CRiSis™ Manikin. Contact us to confirm compatibility with your specific configuration before ordering.

Q: Are lungs and stomach included? A: No. Lungs and stomach are not included and must be ordered separately. Pump spray lubricant is included as standard.

Q: What is the difference between this head (LF03593U) and the complete board-mounted trainer (LF03762)?

A: LF03762 is a complete standalone trainer — board-mounted with stand, carry case, and stomach rise included — covering all six advanced airway capabilities including digital intubation. LF03593U is a head-only upgrade unit without board, stand, or stomach rise, designed to attach to existing platforms. Choose LF03593U for upgrading an existing Child CRiSis™ or child airway trainer; choose LF03762 for a complete standalone paediatric airway training solution.

	Head/torso	Age	Digital intubation	Tongue edema	Laryngospasm	Stomach rise	Suctioning	Manual carotid pulse	Defibrillation	Additional features
NG Tube Insertion Trainer *Item No:* 1017250	head mounted on a board	1-year old	-	-	-	Yes	-	-	-	trainer for instruction of nasogastric tube insertion and care
