SKU:

Categories: Ear, Nose and Throat Examination

Product Description

Software upgrade with set of 3 applications (image creator, image annotator and slide presenter) that allows healthcare educators to customize their simulation training sessions.
Near-identical to previous product — but for OtoSim 2™ not OphthoSim™. Item No. 1021953, 0.1 kg, MPN 61-101 — same three-application suite (image creator, image annotator, slide presenter), same no Make/Brand field. The distinction: this toolkit customises the **OtoSim 2™** otoscopy simulator, while the previous (1021956/63-101) customises the **OphthoSim™** ophthalmoscopy simulator. Same description logic applies, adapted for otoscopy context.

Why Choose the Educators Toolkit™ for OtoSim 2™ for Your Simulation Lab in India?

The Educators Toolkit™ for OtoSim 2™ (Item No. 1021953, MPN: 61-101) is a 0.1 kg software upgrade for the OtoSim 2™ otoscopy simulator — a three-application suite that enables healthcare educators to build, annotate, and present custom tympanic membrane image sets through the OtoSim 2™ platform, rather than relying solely on the pre-loaded otoscopy image library. For medical colleges, ENT training programmes, general practice training, and clinical skills labs in India that want to align their OtoSim 2™ training sessions with their own institution-specific curriculum, patient case library, or examination question bank, this toolkit provides the authoring capability to do so without vendor dependency on OEM-supplied image sets.

The three applications address different stages of the educator's workflow. The **image creator** allows educators to upload and configure their own tympanic membrane images — such as locally collected clinical photographs or licensed otoscopy image databases — into the OtoSim 2™ display format, extending the platform's pathology library beyond the standard pre-loaded conditions. The **image annotator** enables structured labelling and teaching notes to be added directly to diagnostic images, creating annotated teaching cases that trainees examine through the OtoSim 2™ and then review with instructor commentary. The **slide presenter** organises the configured image sets into structured teaching sequences for group sessions or OSCE preparation, enabling the instructor to advance through a pre-planned otoscopy recognition curriculum from a single interface. For simulation labs running both OtoSim 2™ and OphthoSim™, the equivalent toolkit for the OphthoSim™ platform (Educators Image Toolkit™ for OphthoSim™, Item No. 1021956) is also available.

Why Buy from SEM Trainers? SEM Trainers & Systems has over 30 years of experience supplying medical simulators and genuine OEM accessories to 1,500+ institutions across 28 states in India. We provide pan-India delivery and dedicated after-sales support.

Frequently Asked Questions

Q: What are the three applications in this toolkit? A: Image creator (upload and configure custom tympanic membrane images), image annotator (add structured labels and teaching notes), and slide presenter (organise images into structured teaching sequences for group or OSCE sessions).

Q: Do I need an OtoSim 2™ to use this toolkit? A: Yes. This is a software upgrade for the OtoSim 2™ otoscopy simulator — it does not function as a standalone product.

Q: Is there an equivalent toolkit for the OphthoSim™? A: Yes — the Educators Image Toolkit™ for OphthoSim™ (Item No. 1021956) provides the same three-application suite for the OphthoSim™ ophthalmoscopy platform.
