SKU:

Categories: Ear, [Nose and Throat Examination](#)

Product Description

Why Choose the NG Tube Insertion Trainer for Your Simulation Lab in India?

The NG Tube Insertion Trainer (Item No. 160-8551U / 1017250 / W44674) by Nasco Healthcare, USA is a 1.35 kg, 30.5 × 30.5 × 22.9 cm economical nasogastric tube insertion and care trainer — a 1-year-old infant head representation mounted on a flat stabilising board, with the oesophagus and stomach contained within the head for compact storage and easy transport to different classrooms or lab tables. For nursing colleges, paediatric nursing training programmes, and NMC-mandated clinical skills labs in India that need a dedicated trainer for NG tube insertion technique practice on an infant patient anatomy, this trainer provides a straightforward, durable, and low-maintenance platform for repeated skill practice.

The trainer presents the correct anatomical nasal and oropharyngeal passage geometry for nasogastric tube insertion on a 1-year-old infant, enabling trainees to practise the tube measurement, lubrication, insertion angle, and advancement steps that are clinically critical for correct NG tube placement in a paediatric patient. Gastric placement can be confirmed by aspirating stomach contents from the included stomach bag — training the aspiration confirmation step. A visible stomach rise on correct tube placement completes the training verification sequence. Simple, no-moving-parts construction assures longevity and straightforward maintenance; the only replacement part is the stomach bag. Cleanup is easy and quick between training sessions. The head mounts on a flat board for stability during practice.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorized distributor of Nasco Healthcare products in India with over 30 years of experience supplying medical simulators to 1,500+ institutions across 28 states. We provide pan-India delivery, on-site installation, faculty orientation, and dedicated after-sales support.

Frequently Asked Questions

Q: What patient age does this trainer represent? A: A 1-year-old infant — providing the correct anatomical proportions for paediatric nasogastric tube insertion practice.

Q: What is the only replacement part? A: The stomach bag. All other components are durable with no moving parts requiring maintenance.

Q: How is correct tube placement confirmed? A: By aspirating stomach contents from the stomach bag — the same aspiration confirmation step used clinically to verify NG tube placement.

Use this economical trainer for instruction of nasogastric tube insertion and care. The esophagus and stomach reside within the head for ease in storing and transporting to various classrooms or lab tables. The head comes mounted on a flat plate to hold it steady. No moving parts and simple construction assure longevity. The only replacement part is the stomach bag. Clean up is easy and quick.

	Head/torso	Age	Digital intubation	Tongue edema	Laryngospasm	Stomach rise	Suctioning	Manual carotid pulse	Defibrillation	Additional features
