Bowel sections dry (6"/15,2 cm)

Item No.	1019687
Weight	0.04kg
MPN:	DSODLB30

Read More

SKU:

Categories: Laparoscopy

Product Description

Pin it to Specimen Mounting Pad (1019688)! Realistic bowel sections for learning and practicing bowel anastomosis techniques, suturing, stapling, and tissue handling. Made ofsoft urethane. Dry to the touch.

New OEM in Laparoscopy subcategory. Item No. 1019687, 0.04 kg, MPN: DSODLB30 — no Make/Brand field. The DSODLB prefix doesn't match Pharmabotics (BTS-prefix) or any known OEM in this session. [Likely] Nasco Healthcare distributed (W-prefix crossreference pattern in the Laparoscopy related products suggests Nasco catalogue), but [Guessing] on the actual OEM — the MPN DSODLB30 is too unusual to attribute confidently. Compatible with Specimen Mounting Pad (1019688). Dry urethane bowel section, 6"/15.2 cm length. Dry variant — contrast with the wet bowel sections

(W44914) visible in the related products.

DESCRIPTION (copy-paste into WordPress product description):

Why Choose the Bowel Sections Dry (6"/15.2 cm) for Your Simulation Lab in India?

The Bowel Sections Dry (6"/15.2 cm) (Item No. 1019687, MPN: DSODLB30, 0.04 kg) are realistic dry urethane bowel section consumables for practising bowel anastomosis techniques, suturing, stapling, and tissue handling in laparoscopic and open surgery skills training. For laparoscopic surgery training programmes, general surgery residency simulation centres, and NMC-mandated clinical skills labs in India that need a lightweight, no-mess, readily available bowel tissue analogue for bench-top anastomosis and suturing skill development, these dry sections are the simpler-to-handle alternative to wet bowel sections when training environment, session duration, or cleanup constraints make wet tissue impractical.

Designed to be pinned to the Specimen Mounting Pad (1019688) for stable working during laparoscopic instrument practice — the mounting pad keeps the bowel section secured on the laparoscopy trainer's working surface while trainees practice end-to-end anastomosis, interrupted or continuous bowel suturing, and stapling technique. Soft urethane construction provides realistic tissue compliance and needle resistance for suturing technique development, without the hydration requirements and storage constraints of wet tissue analogues. The 6"/15.2 cm length provides sufficient working segment for end-to-end bowel anastomosis, the most clinically critical and technically demanding bowel joining technique. For training programmes that want the more realistic moisture, compliance, and handling properties of wet tissue, the Wet Bowel Sections (W44914, 6"/15.2 cm) are the alternative in the same range.

Why Buy from SEM Trainers? SEM Trainers & Systems has over 30 years of experience supplying medical simulators and laparoscopic surgical training consumables to 1,500+ institutions across 28 states in India. We provide pan-India delivery and dedicated after-sales support.

Frequently Asked Questions

Q: What is the difference between dry and wet bowel sections? A: Dry sections (this product, 1019687) are easier to handle and store, with no moisture requirements. Wet Bowel Sections (W44914) are more realistic in compliance and handling but require hydration and have storage constraints.

Q: Which mounting accessory is compatible with these sections? A: The Specimen Mounting Pad (1019688) — designed for pinning bowel sections during laparoscopic and bench-top surgical skills

practice.

Q: How do I order from SEM Trainers? A: Contact us at sem@semtrainers.com or call +91-88495 63724 for pricing and availability.
