SKU:

Categories:Male Examination

Product Description

This kit contains a teen BSE model and a TSE model to teach teens the importance of early detection of cancer. Teen BSE model contains lumps in a variety of sizes. TSE model contains two lumps in each testicle. Each model is made of soft, durable BIOLIKE synthetic tissue and comes with a carrying case.

Why Choose the Teen BSE/TSE Training Set for Your Adolescent Health or Cancer Awareness Programme in India?

The Teen BSE/TSE Training Set (Item No. 1017933 / W43104, MPN: 26495) is a combined breast self-examination (BSE) and testicular self-examination (TSE) health education kit from Health Edco / WRS

Group, USA — designed for school health programmes, adolescent health outreach, ASHA and ANM worker training, nursing college health education modules, and cancer awareness campaigns in India targeting teenage and young adult audiences. The kit provides the tactile, hands-on self-examination training that no poster or diagram can replicate — putting the skill directly into the learner's hands.

Early detection of breast and testicular cancer is most effective when the habit of monthly self-examination is established during adolescence. The Teen BSE/TSE Training Set is specifically designed and sized for a teenage body, making it the appropriate starting point for cancer self-awareness education in young people — distinct from the adult BSE and TSE models used in clinical skills training.

What's in the Kit:

The set contains two models packaged together in a carrying case:

Teen BSE Model (HE-26528) — Breast Self-Examination: A teen-sized breast model made from soft, durable BIOLIKE 2™ synthetic tissue with lumps in a variety of sizes embedded within the tissue. Learners palpate the model using the correct flat-finger circular technique, identifying where lumps are present and practising how to describe their size and location — building the tactile awareness and reporting vocabulary that makes a clinical referral possible.

Teen TSE Model (HE-26400) — Testicular Self-Examination: A teen-sized testicular model made from the same soft BIOLIKE 2™ synthetic tissue, with two palpable lumps in each testicle. Learners palpate the model using the correct two-finger roll technique, identifying where abnormal lumps are present and learning to distinguish testicular lumps from the epididymis and spermatic cord — the key discrimination skill that prevents both missed findings and unnecessary anxiety.

Both models come with a slipcover and are packaged together in a shared carrying case for storage and transport.

Material: BIOLIKE 2™ synthetic tissue — soft, durable, and clinically realistic in its resistance and palpability. Made in the USA.

Why Buy from SEM Trainers? SEM Trainers & Systems has over 30 years of experience supplying health education models to 1,500+ institutions across 28 states in India. We provide pan-India delivery and dedicated after-sales support. Contact us to enquire about the Brown skin tone variant (W43105 / HE-26496) for more inclusive programme delivery.

Q: What does BSE/TSE mean? A: BSE stands for Breast Self-Examination; TSE stands for Testicular Self-Examination. Both are monthly self-check habits recommended for early detection of cancer — BSE for breast cancer, TSE for testicular cancer. This kit trains both skills in one set.

Q: Why is this kit specifically designed for teenagers? A: The breast and testicular models in this kit are sized and scaled for a teenage body — smaller than the adult clinical models used in medical training. This makes them appropriate for adolescent health education programmes in schools, colleges, and community outreach, where the audience is young people learning self-examination for the first time.

Q: How many lumps does each model contain? A: The Teen BSE model contains lumps in a variety of sizes embedded throughout the breast tissue. The Teen TSE model contains two palpable lumps in each testicle (four total). Lump positions are fixed and repeatable, ensuring every learner has the same training experience.

Q: Is this kit suitable for ASHA worker or ANM training? A: Yes. The compact size, carrying case, and self-contained design make it well suited to ASHA worker orientation sessions, ANM community health training, school health nurse visits, and adolescent health outreach camps under RBSK and RKSK programme frameworks.

Q: Is a Brown skin tone variant available? A: Yes — the Brown skin tone variant (MPN: HE-26496 / W43105) is available and is more appropriate for most Indian programme contexts. Contact SEM Trainers to enquire about availability and pricing.

Q: Does this kit come with educational materials? A: The kit includes slipcovers for both models and a shared carrying case. Educational leaflets or instruction cards are not confirmed as included — contact SEM Trainers to confirm what supplementary materials are available with the current stock.
