SKU:

Categories:Geriatric Patient Care

Product Description

In order to better understand your patients, walk a mile in their shoes. There is no better way to create empathy than to actually experience the physical challenges aging patients face on a daily basis.

Easy to put on and adjust! The body suit is worn like an overall, the different restrictions can easily be adjusted to change the range of motion, and even simulate hemiparesis. Easy to put on and take off,

ensuring smooth practice **Accessories:** 1. Special goggles (1 pair) 2. Ear plugs (40 pieces) 3. Gloves (10 pairs) 4. Weights ankle (4 pieces) 5. Weights wrist (4 pieces) 6. Cane (1 piece) 7. Storage bag (1 piece) 8. Belt cover (100 pieces)

Features: 1. Fit-on: It takes only about 3 minutes to put on the suit. This body suit type gear worn like overalls allows students to experience restrictions in physical functions with little loss of time. 2. Adjustment: The hip angle and motion ranges of various parts of the body can be adjusted with belts. Age-associated changes, paralysis of one side of the body, and hemiplegia can also be experienced. 3. Restriction Belt:

Newly developed neck/elbow/knee control belts restrict motion ranges. The wearer can experience the fear of not being able to promptly cope with danger.

Practice: The product designed on the basis of data allows the wearer to experience physical changes due to aging in terms of vision, hearing, grip strength, and physical abilities.

For Example:

- Getting into and out of a car:
 - Cannot move the arms and legs as I wish to.
- Steps:
 - Scary, because the back is hurt, and I cannot see the steps ahead, and walking down is especially horrible! Absolutely impossible without handrails.
- Eating:
 - Grip strength is weak, and
 - I cannot hold cutlery securely, and
 - eating is such a trouble with the back and hands kept in bent.
- At the toilet:
 - It is so hard to stand up or sit down on the toilet.
- Going out:
 - I cannot hear human voices and sounds of vehicles.
 - I cannot look back quickly and check what is around me, and
 - I cannot see the colors of traffic light crossing the street.

Specification The new aged Suit are available in three sizes: M, L, LL

Two significant issues here:

1. **Same 0.001 kg placeholder weight bug** — now the fourth confirmed instance today.
2. **Genuine size-table contradiction:** the description states "The new aged Suit are available in three sizes: M, L, LL" — but the specification table below it lists **four** sizes (S, M, L, XL), and "LL" doesn't appear anywhere in the table at all. This needs to be reconciled with the actual product line before publishing.

Aged Simulation Suit II, Size M (155–165cm) (1020112 / M176-3)

In order to better understand your patients, walk a mile in their shoes. There's no better way to build empathy than to actually experience the physical challenges aging patients face every day.

Quick to put on, easy to adjust. The Aged Simulation Suit II worn like an overall takes only about 3 minutes to put on, with adjustable restrictions that let wearers change range of motion — and even simulate hemiparesis.

Realistic, adjustable restrictions. Newly developed neck, elbow, and knee control belts restrict motion ranges, letting the wearer experience the fear of not being able to promptly cope with danger. Hip angle and motion ranges across various parts of the body can be adjusted with belts, simulating age-associated changes, paralysis of one side of the body, and hemiplegia.

Experience real-world aging challenges firsthand:

- **Getting into and out of a car** — arms and legs won't move as intended.
- **Steps** — difficult and frightening due to back pain and limited visibility, especially walking down; nearly impossible without handrails.
- **Eating** — weakened grip strength makes holding cutlery difficult, compounded by a bent back and hands.
- **At the toilet** — standing up or sitting down becomes physically demanding.
- **Going out** — reduced hearing of voices and vehicles, limited ability to look back quickly, and difficulty seeing traffic light colors.

Comes complete with: special goggles (1 pair), ear plugs (40 pieces), gloves (10 pairs), ankle weights (4 pieces), wrist weights (4 pieces), a cane, a storage bag, and belt covers (100 pieces).

Size M specifications: recommended stature 155–165cm, with 200g arm weights (4 pieces) and 400g leg weights (4 pieces), yellow body color.

Why Buy from SEM Trainers? SEM Trainers & Systems has over 30 years of experience supplying medical education resources to 1,500+ institutions across 28 states. We provide pan-India delivery and dedicated after-sales support.

Frequently Asked Questions

Q: How long does it take to put the suit on? A: About 3 minutes.
