Categories: Obstetrics

Product Description

Trust is one of the core elements of a successful healthcare relationship. It is also one that takes time to build, especially regarding intimate topics. Invest in a long lasting relationship and continued business and utilize education tools to build a strong rapport with your patients. This unique gynecological training model is ideal for demonstration purposes and for training realistic insertions of

female barrier contraceptive devices, which are placed in the vaginal/cervical area. These include:

- Femidom
- FemCap (cervical cap)
- Vaginal ring
- Diaphragm
- Menstrual Cup

The second important function of this simulator is that it is possible to insert the various types of pessaries such as ring, bowl or cube which are used in the event of a prolapse or incontinence. It is also possible to demonstrate how to introduce a IUD (coil) and show where it should be located. The cervical cap can be detected with ultrasound and it is also possible to practice intrauterine insemination (IUI). The transparent vaginal wall allows a view of the inside of the vagina and because the uterus is partially opened up it can be clearly seen how the various devices are inserted. Correct positioning and insertion can be demonstrated and then checked in a teaching scenario, the trainee quickly gains confidence in using the various aids due to a clear representation and simple self-check. This is a very simplified representation of the female pelvis and the female genitalia.

Model for Gynecological Patient Education – 3B Smart Anatomy (1013705 [P53])

Trust is one of the core elements of a successful healthcare relationship — one that takes time to build, especially regarding intimate topics. This unique gynecological training model (Item No. 1013705 [P53], 1.091 kg, 26×19×22 cm) by 3B Scientific is ideal for demonstration purposes and training realistic insertion of female barrier contraceptive devices, placed in the vaginal/cervical area, including femidom, FemCap (cervical cap), vaginal ring, diaphragm, and menstrual cup.

A second important clinical function. It's also possible to insert various types of pessaries — ring, bowl, or cube — used in the event of a prolapse or incontinence. Trainees can also demonstrate how to introduce an IUD (coil) and show correct placement. The cervical cap can be detected with ultrasound, and it's possible to practice intrauterine insemination (IUI).

Transparent design for clear visualization. The transparent vaginal wall allows a view of the inside of the vagina, and because the uterus is partially opened up, trainees can clearly see how various devices are inserted. Correct positioning and insertion can be demonstrated and then checked in a teaching scenario, letting trainees quickly gain confidence in using the various aids through clear representation and simple self-check.

A simplified, focused representation of the female pelvis and genitalia, purpose-built for patient education and hands-on device insertion training.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorised distributor of 3B Scientific

products in India with over 30 years of experience supplying medical education resources to 1,500+ institutions across 28 states. We provide pan-India delivery and dedicated after-sales support.

Frequently Asked Questions

Q: What contraceptive devices can be practiced with this model? A: Femidom, FemCap (cervical cap), vaginal ring, diaphragm, and menstrual cup.

Q: Can pessaries be practiced too? A: Yes — ring, bowl, or cube pessaries used for prolapse or incontinence.

Q: Can this model be used for IUD training? A: Yes — trainees can practice IUD insertion and correct placement, and the cervical cap can be detected with ultrasound.
