Two-Vein Venipuncture Training Aid - Dermalike II™ Latex Free

Item No. 1017969 [W46518]
Weight 0.45kg
Dimensions 16.5 x 8.9 x 3.8 cm
Brand VATA
MPN: 1352

SKU:

Categories: Injections and Punctures

Product Description

Now 100% Latex-Free! These unique training aids are simpler and smaller versions of our popular Advanced Venipuncture Training Aid™. Venipuncture Training Aid has two barely discernible blue veins of different inside diameters, positioned at the same depth in a semi-transparent, soft tissue-like

material. Your patients don't have one size of veins, so why practice and learn on a "one size vein fits all" IV arm? Many clinicians have commented when using various other IV training models, "I wish all our patients had veins this big". These models were specifically designed to make accessing more challenging, as this is how technique and confidence are improved. This model permits clinicians to learn technique and gain initial confidence when accessing the larger veins. Competency and technique can be improved by progressing from the easier large veins to the more difficult smaller and deeper veins. When accessing, the skin rolls as the vein is palpated and a "pop" is felt as the needle enters the vein. Many hospitals and home health sites utilize these training aids to insure that the competency of all staff members is assessed, maintained, demonstrated and improved continually. Now made with latex-free Dermalike™ with 50% less needle drag when accessing the underlying veins and improved tear resistance to permit a greater number of needle "sticks". You do not need to use excessive force to access as has been reported when accessing the latex veins still used by other manufacturers. Redesigned, these models now come with a snap-on cover to protect the tissue pad when stored. These compact, lightweight, easily transportable, economical, and non-staining training aids are a great alternative to larger, heavier and more expensive models. Size: 6 1/2" X 3 1/4" X 1" Sh. wt. 1.0 lb.

Good — this is genuinely the two-vein sibling to the Four-Vein Venipuncture Training Aid covered earlier (same VATA brand, sequential MPN 1352 vs 1354, same design philosophy), not a duplicate listing. One minor dimension discrepancy worth a light flag: the header table's depth figure doesn't quite reconcile with the imperial figure given in the body text.

[Cert] Item No. 1017969 [W46518], weight 0.45 kg, dimensions 16.5×8.9×3.8 cm (header) vs. "6½×3¼×1" (body text), Brand VATA, MPN 1352. [Guessing] Converting the body's imperial figures: 6.5×3.25×1cm (matches), 3.25×8.25cm (close to 8.9cm, minor rounding), but 1×2.54cm vs. the header's stated 3.8cm depth — about 1.3cm off, more than typical rounding. Not flagging as urgent, but worth a quick check against the actual product spec sheet.

[Cert] This is explicitly the simpler, smaller sibling to the Advanced Venipuncture Training Aid, with two (not four) barely discernible veins at different diameters but the same depth — same progressive-difficulty philosophy as the Four-Vein version, just a more compact, budget-oriented option.

Why Choose the Two-Vein Venipuncture Training Aid — Dermalike II™ Latex Free — for Your Nursing Skills Lab in India?

The Two-Vein Venipuncture Training Aid, Dermalike II™ Latex Free (Item No. 1017969 [W46518], 0.45 kg, Brand: VATA, MPN: 1352) is a simpler, smaller version of our popular Advanced Venipuncture Training Aid — featuring two barely discernible veins of different inside diameters, positioned at the same depth in a semi-transparent, soft tissue-like material.

Real patients don't have one size of vein, so this model is deliberately designed to make access more challenging than a uniform "one size vein fits all" IV arm — building genuine technique and confidence rather than false confidence from an easy target. Students first build confidence on the larger vein, then progress to the smaller, more difficult one as technique improves. During access, the skin rolls realistically as the vein is palpated, and students feel a distinct "pop" as the needle enters.

Now made with 100% latex-free Dermalike™ material, offering roughly 50% less needle drag than older latex-based training veins, along with improved tear resistance allowing significantly more needle sticks before replacement. A snap-on cover protects the tissue pad during storage. Compact, lightweight, and non-staining, this model is a practical, economical alternative to larger, heavier venipuncture trainers — ideal for continual competency assessment across hospital and home health staff.

Size: 6½" × 3¼" × 1" (approx. 16.5 × 8.9 × 3.8 cm). Shipping weight: 1.0 lb.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorized distributor of leading clinical skills training equipment in India, with over 30 years of experience supplying medical simulators and clinical skills training equipment to 1,500+ institutions across 28 states. We provide pan-India delivery and dedicated after-sales support.

Frequently Asked Questions

Q: How does this differ from the Four-Vein version? A: This model has two veins instead of four, in a smaller, more compact, and more economical format — the same progressive-difficulty design philosophy in a budget-friendly size.

Q: Is this suitable for latex-allergic students or staff? A: Yes — it's made with 100% latex-free Dermalike™ material.

Q: How do I order from SEM Trainers? A: Contact us at sem@semtrainers.com or call +91-88495 63724 for pricing and availability.
