SKU:

Categories: Injections and Punctures

Product Description

The Mike® and Michelle® injection arm and hand simulate that of a 5 year old, with lifelike venous structure. The dorsum of the hand has two veins for additional intravenous set-up. The flexor and lateral sides of the arm contain sites for subcutaneous injections. The deltoid contains an intramuscular injection site. Two interchangeable hands are supplied with the simulator. Features:

- Intravenous injections infusion, and blood collection
- Subcutaneous injections in both flexor and lateral sides of forearm
- Intramuscular injections in deltoid area Lifelike venous structure
- Dorsum of hand has two veins for additional intravenous set-up Interchangeable hands: clapping hand and fingers extended for finger prick
- Squeeze bulb simulating either collapsed or distended veins

- Easily replaceable skin and veins that withstand multiple needle sticks
- Mounted on smoked Lucite® base and supplied with blood bag and stand, synthetic blood concentrate, squeeze bulb, and spare arm skin
- Soft carrying bag
- Instruction manual

Ties back nicely to the Mike® and Michelle® 1-year-old simulator covered earlier — this is the 5-year-old version of the same product family, for the arm specifically. Clean data; the only thing to fix is a formatting run-on in the source bullet list where two separate features got merged into one line.

[Cert] Item No. 1018860 [W45094], weight 2.175 kg, MPN S405.M. [Cert] Source formatting issue (not a factual error): two pairs of bullets ran together without line breaks — "Intramuscular injections in deltoid area Lifelike venous structure" and "Dorsum of hand has two veins for additional intravenous set-up Interchangeable hands" are each actually two separate features. I've split them below.

Why Choose the Five Year Injection Training Arm for Your Pediatric Nursing Skills Lab in India?

The Five Year Injection Training Arm (Item No. 1018860 [W45094], 2.175 kg, MPN: S405.M) is the Mike® and Michelle® injection arm and hand, simulating that of a five-year-old child with lifelike venous structure for realistic pediatric IV and injection training.

The dorsum of the hand has two veins for additional intravenous set-up practice. The flexor and lateral sides of the forearm contain sites for subcutaneous injections, and the deltoid contains a dedicated intramuscular injection site. Two interchangeable hands are supplied — a clasping hand and one with fingers extended for finger prick practice.

Features:

- Intravenous injection, infusion, and blood collection
- Subcutaneous injections on both flexor and lateral sides of the forearm
- Intramuscular injections in the deltoid area
- Lifelike venous structure
- Dorsum of hand has two veins for additional intravenous set-up
- Interchangeable hands: clasping hand, and fingers-extended hand for finger prick practice
- Squeeze bulb simulates either collapsed or distended veins
- Easily replaceable skin and veins that withstand multiple needle sticks
- Mounted on a smoked Lucite® base

Supplied with: Blood bag and stand, synthetic blood concentrate, squeeze bulb, spare arm skin, soft carrying bag, instruction manual.
