## Life/form® Pediatric Arm

Item No. LF00958U

Weight 2kg

Dimensions 56 x 28 x 15 cm

Make: Nasco Healthcare, USA

[Read More](#)

**SKU:**

**Categories:** Injections and Punctures

## Product Description

This model provides realistic sensation and response. The lifelike vinyl skin actually rolls as you palpate to allow location of the vein. The synthetic rubber tubing for the veins was carefully selected to provide a lifelike simulation of vein size, and feeling of puncture and palpation for practicing venipuncture. A soft foam is used to simulate the deltoid muscle and allows the student to “get the feel” of administering intramuscular injections to children. Simulated bone in the shoulder defines and limits the injection area. Water may be used as an injection fluid in the shoulder area. Includes a Life/form® Arm with white skin, fluid supply bag, 3 cc syringe, one pint Life/form® blood, teaching guide, and hard carrying case. • Practice venipuncture and intramuscular injection techniques and procedures used in young children • Exact reproduction of the arm of a six-year-old child.

Good, distinct product here. The genuinely distinctive angle to flag upfront: this is an **exact reproduction of a six-year-old child's arm**

— a specific developmental age point, not a generic "kid-sized" scale-down — and it dual-purposes for both venipuncture and IM injection practice, with a simulated bone that physically limits the injection zone for safety-aware technique.

---

## Why Choose the Life/form® Pediatric Arm for Your Nursing Skills Lab in India?

The Life/form® Pediatric Arm (Item No. LF00958U, Weight: 2kg, Dimensions: 56 x 28 x 15 cm, Make: Nasco Healthcare, USA) is an exact reproduction of the arm of a six-year-old child — not a generic scaled-down adult arm — giving students realistic proportions and feel for practicing on young pediatric patients specifically.

The lifelike vinyl skin rolls naturally as you palpate, helping students locate veins the way they would on a real child. The synthetic rubber vein tubing was carefully selected to replicate authentic vein size and the sensation of puncture and palpation during venipuncture practice.

**Beyond venipuncture, the arm also supports intramuscular injection training:** soft foam simulates the deltoid muscle, letting students get the feel of administering injections to children, while a simulated bone in the shoulder defines and limits the injection area — reinforcing safe injection-site awareness. Water may be used as an injection fluid in the shoulder area.

**What's included:** Life/form® Arm with white skin, fluid supply bag, 3cc syringe, one pint of Life/form® simulated blood, teaching guide, and a hard carrying case.

### Specifications:

- Practices venipuncture and intramuscular injection techniques used in young children
- Exact reproduction of a six-year-old child's arm
- Carton size: 22" x 11" x 6"

**Why Buy from SEM Trainers?** SEM Trainers & Systems is an authorized distributor of Nasco Healthcare products in India with over 30 years of experience supplying medical simulators and clinical skills training equipment to 1,500+ institutions across 28 states. We provide pan-India delivery and dedicated after-sales support.

### Frequently Asked Questions

Q: What age is this arm modeled on? A: It's an exact reproduction of the arm of a six-year-old child.

Q: Can this arm be used for both venipuncture and injection practice? A: Yes — it supports both venipuncture technique and intramuscular injection practice in the deltoid.

Q: Is there a safety feature limiting the injection site? A: Yes — a simulated bone in the shoulder defines and limits the injection area.

Q: How do I order from SEM Trainers? A: Contact us at [sem@semtrainers.com](mailto:sem@semtrainers.com) or call +91-88495 63724 for pricing and availability.
