Life/form® Advanced Venipuncture and Injection Arm- Dark Skin

Item No. LF01126U
Weight 7.818kg
Make: Nasco Healthcare, USA

[Read More](#)

SKU:

Categories: Injections and Punctures

Product Description

This revolutionary training arm provides complete venous access for IV therapy and phlebotomy, plus sites for intramuscular and intradermal injections. An extensive 8-line vascular system allows students to practice venipuncture at all primary and secondary locations, including starting IVs and introducing Over the Needle IV Catheters. The venous system simplifies setup with only one external fluid bag supplying artificial blood to all veins simultaneously. The dorsal surface of the hand includes injectable metacarpal, digital, and thumb veins. The antecubital fossa includes the median cephalic, median basilic, and median cubital veins. Venipuncture can also be performed along the basilic, cephalic, accessory cephalic, and median antebrachial veins. Intramuscular injections may be performed in the deltoid muscle and intradermal injection sites are located in the upper arm. Intramuscular injections into the deltoid muscle are enhanced by the soft, lifelike skin and by the natural bony landmarks in the region. Intradermal injections using distilled water will create characteristic skin welts at designated

sites on the upper arm. The realism of the **Life/form®** Advanced Venipuncture and Injection Arm is truly amazing. The soft, flexible fingers are molded separately with extreme attention paid to every detail - right down to the fingerprints! Flexion of the wrist helps students develop manipulation skills. The replaceable skin rolls as the veins are palpated, and a discernable “pop” is felt when entering the veins. The **Life/form®** molding process reproduces the fine details of the skin to make the arm look and feel alive. Valves in the veins can be seen and palpated on the skin surface. Simulated veins and skin are completely replaceable to keep this training arm looking and working like new. Under normal use, hundreds of injections may be performed before the veins or skin need to be replaced. Complete replacement kits are available and easy to use. To extend the life of the veins, an aerosol sealant is available to seal punctures and prevent leakage. Includes 2 uarts of simulated blood, 3 cc syringe, 12 cc syringe, needle, two fluid bags, instruction manual, and hard carry case. Fluid supply stand not included.

Why Choose the Life/form® Advanced Venipuncture and Injection Arm — Dark Skin for Your Nursing Skills Lab in India?

The Life/form® Advanced Venipuncture and Injection Arm (Item No. LF01126U, Weight: 7.818kg, Make: Nasco Healthcare, USA) is a full-scope training arm for IV therapy, phlebotomy, and injection technique — not a single-skill trainer. It gives students genuine insertion practice across an extensive 8-line vascular system, letting them start IVs and place over-the-needle IV catheters at all primary and secondary venipuncture sites.

What makes the vascular system stand out: a single external fluid bag supplies artificial blood to all veins simultaneously, simplifying setup for instructors running back-to-back sessions. The dorsal hand includes injectable metacarpal, digital, and thumb veins; the antecubital fossa includes the median cephalic, median basilic, and median cubital veins; and venipuncture can also be practiced along the basilic, cephalic, accessory cephalic, and median antebrachial veins.

Beyond IV access, the arm also supports:

- **Intramuscular injections** in the deltoid, aided by soft, lifelike skin and natural bony landmarks
- **Intradermal injections** in the upper arm — using distilled water to raise characteristic skin welts at designated sites

The realism extends to the details: separately molded, flexible fingers (down to fingerprints), a flexible wrist for manipulation practice, skin that rolls as veins are palpated, and a discernible "pop" felt on vein entry. Visible, palpable valves in the veins add further realism. Simulated veins and skin are fully replaceable — under normal use, hundreds of injections can be performed before replacement is needed, and an aerosol sealant is available to extend the working life of the veins between replacements.

What's included: 2 quarts of simulated blood, 3cc syringe, 12cc syringe, needle, two fluid bags, instruction manual, and a hard carrying case. (*Fluid supply stand not included.*)

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorized distributor of Nasco Healthcare products in India with over 30 years of experience supplying medical simulators and clinical skills training equipment to 1,500+ institutions across 28 states. We provide pan-India delivery and dedicated after-sales support.

Frequently Asked Questions

Q: Can students practice full IV insertion on this arm? A: Yes — this arm is designed for complete venipuncture and IV-start practice, including introducing over-the-needle IV catheters, unlike single-purpose IV pads.

Q: What injection types can be practiced beyond IV access? A: Intramuscular injections in the deltoid and intradermal injections in the upper arm (which raise realistic skin welts when distilled water is used).

Q: Are the veins and skin replaceable? A: Yes — both are fully replaceable, and hundreds of injections can typically be performed before replacement is needed. An aerosol sealant is available to extend vein life.

Q: Is a fluid supply stand included? A: No — the fluid supply stand is sold separately.

Q: How do I order from SEM Trainers? A: Contact us at sem@semtrainers.com or call +91-88495 63724 for pricing and availability.
