Paediatric Head

Item No. LF00999U
Weight 3.75kg
Dimensions 45 x 23 x 12 cm
Make: Nasco Healthcare, USA

[Read More](#)

SKU:

Categories: Injections and Punctures

Product Description

An invaluable tool for demonstrating and practicing infusions and injections in the temporal and jugular veins of a newborn to a twelve-month-old infant. The neck is made of soft, flexible foam to provide a realistic feel of palpation and puncture. The paediatric head includes the following:

- Head (to represent

a six-month-old infant) with skin and veins • Fluid supply bag • 2 different gauge winged infusion needles • Artificial blood Supplied with hard carrying case.

Paediatric Head — Temporal & Jugular Vein Access Trainer for Infant IV Training

The Paediatric Head (Item No. LF00999U, 3.75 kg, 45 × 23 × 12 cm) by Nasco Healthcare, USA is built for demonstrating and practicing infusions and injections in the temporal and jugular veins — access points commonly used in young infants where peripheral IV access can be difficult. The head represents a six-month-old infant, giving students a realistic scalp and neck anatomy reference point for this specific pediatric access technique.

Realistic palpation and puncture feel. The neck is made of soft, flexible foam, closely replicating how palpation and needle puncture feel on an actual infant patient — important for building the light-touch technique needed for pediatric vascular access, which differs meaningfully from adult IV insertion.

What's included: Head (representing a six-month-old infant) with skin and veins, fluid supply bag, two different gauge winged infusion needles, and artificial blood — plus a hard carrying case for transport and storage between sessions.

Why this matters for pediatric nursing training in India: temporal and jugular access is a specialized skill that's hard to practice safely on real infant patients. A dedicated trainer lets students build confidence and technique before their first clinical exposure to pediatric vascular access.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorised distributor of Nasco Healthcare products in India with over 30 years of experience supplying medical simulators and clinical skills trainers to 1,500+ institutions across 28 states. We provide pan-India delivery and dedicated after-sales support.

Frequently Asked Questions

Q: What age does the head represent? A: The head is modeled to represent a six-month-old infant's anatomy for temporal and jugular vein access training.

Q: What needle sizes are included? A: Two different gauge winged infusion needles are supplied, along with a fluid supply bag and artificial blood for realistic practice sessions.
