IV Arm- Child- 5 years old

Item No. LF03612U
Weight 3.905kg
Make: Nasco Healthcare, USA

[Read More](#)

SKU:

Categories: Injections and Punctures

Product Description

An exact reproduction of the arm of an 5-year-old for practice of venipuncture and intramuscular injection techniques and procedures used in young children. Features realistic vinyl skin and latex veins so the skin actually rolls as you palpate the vein, and the characteristic “pop” can be felt as the needle penetrates the vein. Realistic flashback occurs with proper insertion. The arm pivots at the upper arm for easy accessibility to antecubital fossa, along the forearm, and at the back of the hand. A bony landmark at the shoulder helps identify muscle tissue for intramuscular injections. For attachment to the left shoulder of the Child CPR/Airway Management Torso (1018865). The arm comes with light skin, two fluid supply bags, 3 cc syringe, 12 cc syringe, needle, one pint Life/form® blood, teaching

guide, and carry case.

This confirms and names the exact base unit ("Child CPR/Airway Management Torso," item 1018865) that the earlier Intraosseous Infusion/Femoral Access Leg also attaches to — good, closes that cross-reference loop. Clean data otherwise, no needle gauge given this time so nothing to flag there.

[Cert] Item No. LF03612U, weight 3.905 kg, Make Nasco Healthcare, USA. [Cert] An exact reproduction of a 5-year-old's arm for venipuncture and intramuscular injection practice specific to pediatric technique — genuinely distinct from adult training since pediatric vein access and landmark identification differ meaningfully from adult procedure. Attaches to the left shoulder of the Child CPR/Airway Management Torso (Item 1018865).

[Cert] Same realism features as the adult-scale trainers this session: vinyl skin and latex veins that roll during palpation, a distinct "pop" as the needle enters, and realistic flashback confirming correct insertion. The arm pivots at the shoulder for access to the antecubital fossa, forearm, and back of the hand, and a bony shoulder landmark helps identify muscle tissue for IM injection.

Why Choose the IV Arm — Child, 5 Years Old — for Your Pediatric Nursing Skills Lab in India?

The IV Arm, Child, 5 Years Old (Item No. LF03612U, 3.905 kg, Make: Nasco Healthcare, USA) is an exact reproduction of a five-year-old's arm, purpose-built for practicing venipuncture and intramuscular injection technique specific to young children — a genuinely distinct skill set from adult venous access.

Realistic vinyl skin and latex veins allow the skin to roll as veins are palpated, with a distinct "pop" felt as the needle penetrates and realistic flashback confirming correct insertion. The arm pivots at the shoulder for easy access to the antecubital fossa, along the forearm, and at the back of the hand, and a bony landmark at the shoulder helps students identify the correct muscle tissue for intramuscular injections.

This arm attaches directly to the left shoulder of the Child CPR/Airway Management Torso (Item 1018865), extending that manikin's training scope to include pediatric venous and intramuscular access.

Includes: Light skin, two fluid supply bags, 3cc syringe, 12cc syringe, needle, one pint of Life/form® blood, teaching guide, carry case.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorized distributor of Nasco Healthcare products in India with over 30 years of experience supplying medical simulators and pediatric clinical skills training equipment to 1,500+ institutions across 28 states. We provide pan-India delivery and dedicated after-sales support.
