SKU:

Categories: Injections and Punctures

Product Description

The economical IV Training Arm and Hand combine realism, fine detail, and lightweight convenience in a single trainer. These self-contained trainers are packaged in a plastic case that can be converted into a work station. Trainers include everything you will need to begin training and practicing IV skills. The Life/form® Portable IV Training Arm and Hand Trainers are constructed of soft material with life-like veins in the skin surface that are visible and palpable. Veins are accessible at the antecubital fossa, along the forearm, the back of the hand, and thumb veins, making it possible to practice venipuncture at any of the common sites. When puncturing through the vinyl skin and veins, the skin will actually roll as you palpate the veins and the characteristic “pop” can be felt as the needle penetrates the vein. These trainers are the ideal way to teach venipuncture techniques including starting IVs and introducing Over the Needle IV catheters, and a realistic flashback will be observed when the needle has been accurately inserted into the vein. These trainers are inexpensive enough so that each student

can have their own arm and hand to practice technique and skills required in their courses. Under normal use, hundreds of injections may be performed. The skins and veins cannot be changed and trainers will eventually need to be replaced. Included with each of the trainers are two IV bags, packet of blood powder and spoon, plastic fluid supply stand, two pinch clamps, 3 cc syringe, 12 cc syringe, 12 gauge needle, a winged infusion set, and a plastic clamshell storage case.

Worth flagging clearly: the "12 gauge needle" spec is almost certainly a typo. 12 gauge is an extremely thick needle — nowhere near typical venipuncture range (18–24 gauge is standard clinical practice, and every other Nasco product this session specifying a needle used 22 gauge). I'm not silently correcting this since I can't confirm the intended figure with certainty; it needs verification against the actual brochure before publishing.

[Cert] Item No. LF00702U, weight 0.8 kg, Make Nasco Healthcare, USA. [Cert] Explicitly stated: **skins and veins cannot be changed** — unlike most other IV trainers this session, this is a genuinely disposable/non-repairable unit. Once worn out, the whole trainer needs replacement rather than just the skin/vein set. Worth stating plainly since it's a real cost-of-ownership consideration, not a minor detail.

[Cert] Same recurring 3bscientific.co.uk comparison table (eighth instance) — noted, not re-detailed.

[Cert] Genuinely good budget positioning: designed to be inexpensive enough that each student can have their own individual arm/hand, rather than sharing one trainer across a cohort — a real pedagogical advantage for repetitive skill-building, distinct from the premium repairable trainers covered elsewhere.

DESCRIPTION (copy-paste into WordPress) — ?? needle gauge needs verification, see flag above; comparison table intentionally omitted:

Why Choose the IV Arm & Hand Trainer for Your Nursing Skills Lab in India?

The Life/form® IV Arm & Hand Trainer (Item No. LF00702U, 0.8 kg, Make: Nasco Healthcare, USA) is an economical, self-contained venipuncture trainer packaged in a plastic case that converts into a work station — everything needed to begin practicing IV skills, in one compact unit.

Life-like veins are visible and palpable at the antecubital fossa, along the forearm, the back of the hand, and thumb — covering all common venipuncture sites. The skin rolls realistically as veins are palpated, with a distinct "pop" felt as the needle penetrates and a realistic flashback confirming correct placement, exactly like the premium trainers in this line.

Its low cost makes it practical for one-trainer-per-student programs, letting every student build hands-on repetition rather than sharing a single unit. Under normal use, hundreds of injections can be performed.

Please note: skins and veins on this model **cannot be replaced** — the unit is designed as an affordable, eventually-disposable trainer rather than a long-term repairable one, unlike our premium IV arm trainers.

Includes: Two IV bags, packet of blood powder and spoon, plastic fluid supply stand, two pinch clamps, 3cc syringe, 12cc syringe, [needle gauge — please confirm, likely 22 gauge], winged infusion set, plastic clamshell storage case.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorized distributor of Nasco Healthcare products in India with over 30 years of experience supplying medical simulators and clinical skills training equipment to 1,500+ institutions across 28 states. We provide pan-India delivery and dedicated after-sales support.

Frequently Asked Questions

Q: Can the skin and veins be replaced when worn? A: No — this model's skin and veins are not replaceable; the unit will eventually need full replacement.

Q: Is a fluid supply stand included? A: Yes — a plastic fluid supply stand comes included with this trainer.

Q: How do I order from SEM Trainers? A: Contact us at sem@semtrainers.com or call +91-88495 63724 for pricing and availability.
