SKU:

Categories:ALS Child

Product Description

Life/form® Child CRiSis™ Manikins This complete resuscitation system is designed for teaching individuals or groups life-saving techniques for children. It provides complete Pediatric Advanced Life Support (PALS) training capabilities and combines all of the skill stations on one manikin, making training more realistic and giving students an appreciation for the smaller scale of the patient. Simulates a 5-year old child, 118 cm tall and 9 kg in weight. **Airway Management**

- Compatible airway management devices include E.T., E.O.A., E.T.L., L.M.A., E.G.T.A., Combitube®, and King Systems
- Inflatable stomach bladder to indicate esophageal intubation
- Oral, nasal, and digital intubation capabilities
- Realistic anatomical features
- Separate left and right lungs for auscultation

- Suctioning capabilities

Intraosseous Infusion

- Palpable landmarks include the patella, tibia, and tibial tuberosity
- Pressurized system allows aspiration of fluid
- Replaceable bones and skin

Blood Pressure Arm

- Auscultatory gap
- Systolic and diastolic levels, heart rate, and sound volume
- Palpable radial pulse
- Speaker in arm reproduces real blood pressure sounds
- 5 Korotkoff sounds

CPR

- Fully articulated head, neck, and jaw thrust
- Visual landmarks and palpable carotid pulse (manual)

IV Arm

- Articulated at the biceps for antecubital and dorsal access
- Realistic flashback from a pressurized system

Defibrillation Chest

- Compatible with all standard brands and types of defibrillators, monitors, and patient simulators
- Internal load box absorbs full strength shock
- Manual, automatic, and semi-automatic defibrillation
- Rhythms are detected at 4 ECG sites and 2 defibrillation sites

Femoral Access

- Palpable arterial pulse (manual)
- Palpable symphysis pubis and anterior superior iliac spine
- Realistic flashback from pressurized venous system

Why Choose the Life/form® Basic Child CRiSis™ with Advanced Airway Management for Your Simulation Lab in India?

The Life/form® Basic Child CRiSis™ with Advanced Airway Management (Item No. LF03665U) by

Nasco Healthcare, USA is identical to the Basic Child CRiSis™ (LF03765U) in every respect — same 11.919 kg weight, same 5-year-old child patient simulation at 118 cm and 9 kg, same airway management and CPR capabilities — with one clinically significant addition: laryngospasm and tongue oedema simulation. This single upgrade transforms the manikin from a standard paediatric airway platform into one that can present genuine difficult airway conditions, requiring trainees to recognise the situation and escalate their management response accordingly. For PALS and paediatric emergency medicine programmes where difficult airway recognition and management is a training objective, this is the correct Basic-tier choice over LF03765U.

The standard airway management module supports the full range of advanced airway devices — ET, EOA, ETL, LMA, EGTA, Combitube®, and King Systems — alongside oral, nasal, and digital intubation, inflatable stomach bladder for oesophageal intubation confirmation, bilateral lung auscultation via separate left and right lungs, and suctioning capability. The fully articulated head, neck, and jaw thrust mechanism and palpable manual carotid pulse support correct positioning and assessment training. The Advanced Airway Management upgrade adds laryngospasm and tongue oedema to this foundation — enabling instructors to introduce a deteriorating or obstructed paediatric airway scenario mid-session, requiring trainees to identify the condition from clinical signs and apply the correct escalation response including BVM ventilation, repositioning, and airway adjunct selection. This capability is absent in LF03765U and only available in the "with Advanced Airway Management" configurations across the Child CRiSis™ family. As with the Basic, the Interactive ECG Simulator (1005666) and carry case (1005651) are optional add-ons; blood pressure arm, defibrillation chest, femoral access, IO infusion, and IV arm are not included and are available from the Complete configurations upward.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorized distributor of Nasco Healthcare products in India with over 30 years of experience supplying medical simulators to 1,500+ institutions across 28 states. We provide pan-India delivery, on-site installation, faculty orientation, and dedicated after-sales support. All products carry genuine manufacturer warranty and meet ISO 9001 quality standards.

Frequently Asked Questions

Q: What is the only difference between this manikin (LF03665U) and the Basic Child CRiSis™ (LF03765U)? A: Laryngospasm and tongue oedema simulation. Everything else — weight, patient size, airway device compatibility, CPR module, and optional add-ons — is identical. If difficult airway training is a curriculum objective, choose LF03665U. If not, LF03765U is sufficient.

Q: Does this manikin include defibrillation or IV access capability? A: No. This is a Basic-tier configuration covering airway management and CPR only. Defibrillation chest, IV arm, blood pressure arm, femoral access, and IO infusion are available from the Complete Child CRiSis™ (1021994) and Complete with Advanced Airway Management (1021995) upward.

Q: What is the warranty and how do I get support? A: All Nasco Healthcare products carry standard manufacturer warranty. For support, reach us at sem@semtrainers.com or call +91-88495 63724.

Manikin can be used with Supraglottic airway devices for airway training.
