- • Fully articulated head, neck, and jaw
- • Jaw thrust
- • Palpable and visual landmarks
- • Palpable brachial pulse (manual)

ECG/Umbilical Cannulation Skin

- • Allows practice of umbilical cannulation, cutting, and clamping
- • Arrhythmia recognition
- • Aspirate fluid through the umbilicus
- • Learn proper techniques in umbilical catheterization

Intraosseous Infusion

- • Palpable landmarks include the patella, tibia, and tibial tuberosity
- • Pressurized system allows aspiration of fluid
- • Replaceable bones and skin

IV Arm & Leg

- • Realistic flashback from a pressurized system
- • Replaceable skin and veins
- • Smaller lumen tubing simulates the size of a infant's veins

Why Choose the Life/form® Intermediate Infant CRiSis™ for Your Simulation Lab in India?

The Life/form® Intermediate Infant CRiSis™ (Item No. LF03700U / 1021997) by Nasco Healthcare, USA is the second tier in the four-configuration Infant CRiSis™ family, weighing 12.25 kg with a carry case included as standard. It adds three critical modules over the Basic Infant CRiSis™ (LF03707U) — intraosseous infusion, IV arm, and IV leg — making it the entry-level configuration where paediatric vascular access skill training becomes available on the same infant manikin as airway management and CPR. For NRP, PALS, and paediatric nursing training programmes in India that need a single infant manikin covering the core procedural skill set of airway, CPR, IV access, and IO access but where umbilical catheterisation training is not a current curriculum requirement, this is the most cost-effective configuration.

The airway management module presents realistic infant anatomy — mouth, tongue, oral pharynx, larynx, epiglottis, vocal cords, trachea, and oesophagus — and supports oral and digital intubation and suctioning. The manikin is also compatible with supraglottic airway devices. The CPR module features fully articulated head, neck, and jaw with jaw thrust, palpable and visual landmarks, and a palpable brachial pulse. The IV arm provides access to the cephalic and basilic veins and the dorsal venous

arch on the hand; the IV leg provides access to the great saphenous veins and the dorsal venous arch on the foot — both using smaller lumen tubing that simulates the size of an infant's veins with realistic pressurised flashback and replaceable skin and veins. The IO infusion leg features palpable patella, tibia, and tibial tuberosity landmarks with a pressurised aspiration system and replaceable bones and skin. The Interactive ECG Arrhythmia Simulator (LF03670U) is optional for this configuration and must be ordered separately. The ECG/Umbilical Cannulation Skin is **not included** — this capability is available from the Complete Infant CRiSis™ (LF03709U) upward.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorized distributor of Nasco Healthcare products in India with over 30 years of experience supplying medical simulators to 1,500+ institutions across 28 states. We provide pan-India delivery, on-site installation, faculty orientation, and dedicated after-sales support. All products carry genuine manufacturer warranty and meet ISO 9001 quality standards.

Frequently Asked Questions

Q: Does this manikin include umbilical catheterisation training capability? A: No. The ECG/Umbilical Cannulation Skin — which enables umbilical catheterisation including cutting, clamping, cannulation, and fluid aspiration — is not included in the Intermediate configuration. It is available from the Complete Infant CRiSis™ (LF03709U) upward.

Q: What does the Intermediate add over the Basic Infant CRiSis™ (LF03707U)? A: Three modules: intraosseous infusion leg, IV arm, and IV leg. The Basic has only airway management and CPR.

Q: What is the warranty and how do I get support? A: All Nasco Healthcare products carry standard manufacturer warranty. For support, reach us at sem@semtrainers.com or call +91-88495 63724.

Manikin can be used with Supraglottic airway devices for airway training.
