Life/form® Breast Examination Simulator

Item No. LF00984
Weight
make: Nasco Healthcare, USA

[Read More](#)

SKU:

Categories: Women's Health Education

Product Description

The Life/form® Breast Examination Simulator is a teaching and practicing simulator to train individuals breast palpation techniques. Special vinyl formulations have been used to create the most lifelike look and feel possible. A unique feature of this simulator is the realistic fluid breast mass. This mass allows displacement of breast tissue under palpation almost exactly as it occurs in a live patient. Each breast contains abnormalities. The left has a small nodule in the upper outer quadrant and a fibroadenoma in the lower inside quadrant. The right breast has a fixed lump in the upper outer quadrant, a fluid filled cyst in the lower inside quadrant. The simulator allows women to practice all phases of breast examination in both a sitting and supine position. This lightweight simulator is designed with a concave back to allow placement against the patient for ease in demonstrating or practicing palpation techniques. The Life/form® Breast Examination Simulator is complete with teaching guide, American Cancer Society Guide to Breast Examination, and storage box. Now also includes a neck strap (3 ft.

long) and a waist strap (4 ft. long) that are adjustable and can be strapped on. Five-year warranty.
Life/form® Breast Examination Simulator (LF00984) — Clinical Palpation Training with Realistic Fluid Breast Mass

The Life/form® Breast Examination Simulator (Item No. LF00984) by Nasco Healthcare, USA is a teaching and practicing simulator built to train individuals in breast palpation technique, using special vinyl formulations for the most lifelike look and feel possible.

Realistic fluid breast mass for genuine tactile learning. A unique feature of this simulator is its realistic fluid breast mass, which allows displacement of breast tissue under palpation almost exactly as it occurs in a live patient — giving trainees a far more authentic hands-on sense of tissue behavior than a solid, static model would provide.

Four distinct abnormalities for comprehensive examination practice. The left breast contains a small nodule in the upper outer quadrant and a fibroadenoma in the lower inside quadrant. The right breast has a fixed lump in the upper outer quadrant and a fluid-filled cyst in the lower inside quadrant — giving trainees practice identifying multiple distinct abnormality types in a single simulator.

Practice in real clinical positions. The simulator allows women to practice all phases of breast examination in both a sitting and supine position, with a concave back designed for easy placement against the patient body during demonstration or practice.

What's included: simulator, teaching guide, American Cancer Society Guide to Breast Examination, and storage box. Now also includes an adjustable neck strap (3 ft.) and waist strap (4 ft.) for hands-free wear.

Backed by a 5-year warranty.

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorised distributor of Nasco Healthcare products in India with over 30 years of experience supplying medical education resources to 1,500+ institutions across 28 states. We provide pan-India delivery and dedicated after-sales support.

Frequently Asked Questions

Q: How many abnormalities does the simulator contain? A: Four distinct abnormalities across both breasts — a nodule and fibroadenoma on the left, and a fixed lump and fluid-filled cyst on the right.

Q: What positions can be practiced? A: Both sitting and supine positions, using the adjustable neck and waist straps for hands-free wear.

Q: What's included in the box? A: The simulator, a teaching guide, the American Cancer Society Guide to Breast Examination, a storage box, and adjustable neck and waist straps.
