## Zoll Aed Trainer

**Item No.** 100-8008  
**Weight**  
**Brand** Nasco Healthcare

[Read More](#)

**SKU:**100-8008

**Categories:**AED Trainers

## Product Description

This unit allows students to practice realistic device operation using AHA recommended training scenarios. An identical graphical operator interface and complete audio and visual prompts mimic the AED Plus in its look and operation. Screen messages, audible tones, and voice prompts guide the user through all aspects of the rescue from arrival on scene and calling for help, to administering CPR and shock delivery. The convenient handheld remote control for instructor use is preprogrammed with the eight American Heart Association Heartsaver AED training scenarios and offers a manual scenario function, plus "Attach Pads," "Low Battery," and "Call for service" simulations. The Training Unit is powered by six "C" cell batteries or an AC adapter. Supplied with training electrode kit, training remote control, AC adapter, hand-held cord, operator manual, administration guide, and one-year limited warranty. Size 17" x 12" x 16".

The **ZOLL AED Trainer (Item No. 100-8008)** by ZOLL Medical, USA is the authentic training replica of the ZOLL AED Plus — the most widely deployed AED in hospital corridors, ambulances, and public access settings globally. Designed for institutions that use or plan to use ZOLL AED Plus devices in their clinical environments, this trainer delivers exact graphical interface replication, complete audio and visual prompts, and all 8 AHA Heartsaver AED training scenarios — giving trainees direct, hands-on

familiarity with the precise device they will operate in a real emergency.

### Key Features:

- **Identical graphical interface to the ZOLL AED Plus** — same screen layout, button placement, icons, and display messages as the live clinical device; trainees build muscle memory on the trainer that transfers directly to the real AED
- **Complete audio and visual prompts** — screen messages, audible tones, and voice prompts guide the user through every step: arrival on scene, calling for help, CPR delivery, and shock administration
- **8 pre-programmed AHA Heartsaver AED training scenarios** — full range of cardiac arrest presentations including shockable and non-shockable rhythms
- **Manual scenario function** — instructor can override pre-programmed sequences for custom scenario delivery
- **Instructor remote control included** — handheld remote pre-programmed with all 8 scenarios; also includes "Attach Pads," "Low Battery," and "Call for Service" simulations for realistic troubleshooting training
- **Simulated shock delivery** — replicates the full shock sequence with zero high-voltage output; completely safe for training use
- **Dual power options** — operates on 6 × C batteries or AC adapter (both included); eliminates battery dependency for fixed lab installations
- **Training electrode kit included** — realistic pad placement practice with dedicated training electrodes
- **Operator manual and administration guide included**
- **1-year limited warranty**
- **Dimensions:** 43.2 × 30.5 × 40.6 cm

### Ideal For:

- NMC/INC-compliant BLS and ACLS AED skills stations in institutions standardised on ZOLL AED Plus devices
- Medical college and nursing institute simulation labs requiring brand-matched AED training
- Hospital in-service BLS training and code blue preparedness programmes
- Emergency medicine, critical care nursing, and paramedic training programmes
- Institutions equipping AED training stations with the remote control included from day one

### Specification

### Detail

Item No.	100-8008
Make	ZOLL Medical, USA
Replicates	ZOLL AED Plus
Scenarios	8 AHA Heartsaver AED (pre-programmed) + manual function

## Specification

## Detail

Remote Control	Included
Power	6 × C batteries or AC adapter (both included)
Dimensions	43.2 × 30.5 × 40.6 cm
Warranty	1-year limited
High Voltage	None – training use only

**Q: What real AED device does this trainer replicate?** A: It is a training replica of the ZOLL AED Plus — replicating its graphical interface, button layout, screen messages, audible tones, and voice prompts exactly. Institutions that have deployed ZOLL AED Plus devices in their clinical settings will find this trainer produces the most direct device-familiarity transfer to real-world performance.

**Q: How many training scenarios are included?** A: Eight pre-programmed AHA Heartsaver AED scenarios covering the full range of cardiac arrest presentations. An additional manual scenario function allows instructors to build custom training sequences beyond the pre-programmed set.

**Q: Does the remote control come included with this unit?** A: Yes — the handheld instructor remote control is included in the box, pre-programmed with all 8 scenarios and additional simulation functions including "Attach Pads," "Low Battery," and "Call for Service." This distinguishes this unit from simpler AED trainers where the remote is an optional add-on.

**Q: What are the "Attach Pads," "Low Battery," and "Call for Service" simulations?** A: These are troubleshooting and equipment management scenarios the instructor can trigger remotely — simulating common real-world AED error states that trainees need to recognise and respond to. These scenarios are typically absent from lower-specification AED trainers and significantly improve training realism.

**Q: Is this safe to use during training?** A: Yes. The trainer delivers only simulated shocks — there is no high-voltage output. It is completely safe for use with trainees and manikins in a training environment.

**Q: Can this run without batteries?** A: Yes. It operates on either 6 × C batteries or an AC adapter — both are included. The AC adapter option is ideal for fixed skills lab installations where continuous power is available, eliminating the need for battery management.

**Q: How does this differ from the ZOLL AED Trainer Plus 2 (W46277) also available on this site?** A: Both are ZOLL training replicas. The key differences: this unit (100-8008) includes the remote control in the box and offers both battery and AC adapter power; the AED Trainer Plus 2 (W46277) has 10 scenarios vs 8 here, is English-only, and is battery-only. For institutions wanting a complete out-of-box setup with AC power option and remote included, this unit is the stronger choice.

**Q: Is this suitable for NMC-compliant BLS skills labs in India?** A: Yes. The ZOLL AED Trainer

covers all AED operation competency requirements for NMC-compliant BLS and ACLS skills stations in medical college and nursing institute simulation labs.
