Life/form® Universal AED Trainer

Item No. LF03740

Weight

Brand

Nasco Healthcare

[Read More](#)

SKU:LF03740

Categories:AED Trainers

Product Description

- Cables for training pads plug into the rear of unit
- Large LCD display for written prompts
- Low battery indicator
- Provides both audio and written prompts in English
- Volume adjustment
- Measures: 7-1/2 in. x 5 in. x 1-3/4 in.

Prepare students for emergency situations with the **Life/form®** Universal AED Trainer. Simply push a button to set the sequence of events that will help students learn the appropriate steps to follow in both "shock" and "no shock" situations. The instructor can select from four training scenarios for manual and hands-free training. Once the scenario is selected, the trainer will prompt the student in appropriate actions and responses. Lightweight, compact trainer comes with reusable pads and electrode sets, 9V

battery, and operating instructions. Complies with new AHA Guidelines. Five-year warranty.

The **Life/form® Universal AED Trainer (Item No. LF03740)** by Nasco Healthcare, USA is a compact, instructor-controlled AED training device designed for standalone deployment at BLS skills stations. Ideal for institutions that already own CPR manikins and need only the AED training component, this trainer delivers all the core functionality needed to teach AED operation and cardiac arrest response protocols — without the cost of a full bundle.

Key Features:

- **4 selectable training scenarios** — covers both "shock advised" and "no shock advised" cardiac arrest presentations; instructor selects the scenario with a single button press
- **Simultaneous audio and written prompts in English** — large LCD display shows written instructions while audio guides the trainee through each step simultaneously, reinforcing multi-modal learning
- **Manual and hands-free training modes** — supports both instructor-controlled scenario delivery and independent self-directed student practice
- **Reusable training pads and electrode sets** — cable-connected via rear of unit for realistic AED pad placement practice; no single-use consumables required
- **Volume adjustment** — suitable for individual station use or quieter group environments
- **Low battery indicator** — prevents training interruptions due to unexpected power loss
- **Compact and lightweight** — dimensions 19 × 12.7 × 4.4 cm; easy to store, carry, and deploy across multiple training rooms
- **9V battery powered (included)** — no power cables required; fully portable
- **AHA Guidelines compliant**
- **5-year manufacturer's warranty** — the strongest warranty in its class among Nasco AED trainers

Q: What is the difference between this product and the Life/form® AED Trainer bundles (with Basic Buddy™ or Brad™)? A: This is the standalone AED trainer only — no CPR manikin is included. It is the same AED trainer unit that ships inside both bundle SKUs (LF03742U and LF03741U). If your institution already owns CPR training manikins, this standalone unit is the cost-effective way to add or expand AED training capability without paying for a manikin you don't need.

Q: How many training scenarios are available? A: Four pre-programmed scenarios covering both "shock advised" and "no shock advised" situations. The instructor selects the scenario with a button press, and the trainer then guides the student through the full response sequence with audio and written prompts.

Q: Does this trainer work with any CPR manikin? A: Yes. The Life/form® Universal AED Trainer works alongside any standard adult CPR training manikin. The training pads connect via cable to the rear of the unit and are placed on the manikin chest for realistic pad positioning practice.

Q: What training modes are supported? A: Two modes — manual (instructor controls scenario progression) and hands-free (trainer runs the full scenario automatically once selected). Hands-free mode is ideal for self-directed student practice between instructor-led sessions.

Q: Is this product suitable for NMC-compliant BLS skills labs? A: Yes. The Life/form® Universal AED Trainer covers the AED operation competency required for BLS skills stations in NMC-compliant medical college and nursing institute simulation labs. Its 4-scenario design supports structured competency assessment across both shock and no-shock presentations.

Q: What is the warranty on this product? A: It carries a 5-year manufacturer's warranty — significantly longer than most AED trainers in this price range, making it a strong choice for institutional procurement where long-term value and reliability matter.

Q: Does it require any consumables? A: No. The training pads and electrode sets are reusable — no per-session consumable cost. Only 9V batteries are needed periodically (not included after the initial battery).

Q: Who manufactures this product? A: Nasco Healthcare, USA — one of the leading manufacturers of medical simulation and skills training equipment, distributed exclusively in India by SEM Trainers & Systems.

Ideal For:

- NMC/INC-compliant BLS skills stations in medical colleges and nursing institutes that already have CPR manikins
- Institutions expanding AED training capacity by adding standalone trainers to existing CPR manikin stations
- First responder, paramedic, and community CPR + AED awareness training programmes
- Skills labs needing a cost-effective, low-maintenance AED trainer with a long service life
- AYUSH institutions building entry-level emergency response simulation capability

Specification	Detail
Item No.	LF03740
Brand	Nasco Healthcare, USA
Dimensions	19 × 12.7 × 4.4 cm
Power	9V battery (included)
Scenarios	4 pre-programmed
