Categories:AED Trainers

Product Description

The PRESTAN AED UltraTrainer is our most compact, lightweight AED trainer solution with full customization options to accommodate any classroom training situation. This AED trainer resembles a live training experience like no other on the market. For use with patented PRESTAN Pad Sensing System. Programming can toggle between two languages and is easily upgradeable for any AHA guideline changes.

The **PRESTAN AED UltraTrainer™ Single Unit — English/French (Item No. PP-AEDUT-102)** by PRESTAN Products, USA is the English/French language variant of PRESTAN's most compact, lightweight, and customisable AED trainer. Built on the same platform as the English/Spanish model with identical features — including the patented Pad Sensing System and field-upgradeable AHA guideline programming — this variant is specifically suited to institutions serving French-speaking student cohorts or operating in bilingual English/French academic environments.

Key Features:

- **Most compact and lightweight AED trainer in its class** — ultra-portable for multi-station labs, mobile BLS training, and community programmes
- **Patented PRESTAN Pad Sensing System** — verifies correct pad placement by the trainee before advancing the scenario; the only AED trainer in this price range that closes the pad placement verification gap
- **Bilingual English/French toggle** — language switches at the touch of a button; no hardware swap, no additional module purchase required
- **Field-upgradeable for AHA guideline changes** — programming is updateable to reflect any future AHA/ILCOR protocol revisions; protects institutional investment over the full product life
- **Highly realistic live training simulation** — voice-guided full cardiac arrest response sequence replicates real-world AED operation as closely as any trainer available
- **Adult/child training pad compatibility** — single pad set covers both adult and paediatric AED training scenarios
- **3-year limited warranty** against defects in workmanship and materials under normal use
- **Power:** 3 × C batteries (not included)

How It Differs from PP-AEDUT-101 (English/Spanish): The only difference between this model and PP-AEDUT-101 is the second language — French instead of Spanish. All hardware, features, performance specifications, warranty, and accessories are identical. Institutions should select based solely on which language pair best serves their student population.

Ideal For:

- NMC/INC-compliant BLS and AED skills stations in institutions with French-speaking student cohorts
- Medical colleges, nursing institutes, and allied health programmes serving bilingual English/French populations
- Institutions within French-medium or international medical education environments
- Skills labs investing in durable, future-proof AED trainers that will not need replacement when guidelines change
- Community CPR + AED training programmes delivering in both English and French

Specification

Detail

Item No.	PP-AEDUT-102
Make	PRESTAN Products, USA
Languages	English / French (switchable)
Pad System	Patented PRESTAN Pad Sensing System
Pad Compatibility	Adult and child

Specification

Detail

Power	3 × C batteries (not included)
Warranty	3-year limited
AHA Guideline Updates	Field-upgradeable

Q: What is the difference between this model (PP-AEDUT-102) and the English/Spanish model (PP-AEDUT-101)? A: The only difference is the second language — this model toggles between English and French, while PP-AEDUT-101 toggles between English and Spanish. All features, dimensions, pad system, warranty, and accessories are identical. Choose based on which language pair your institution requires.

Q: What is the Pad Sensing System? A: PRESTAN's patented Pad Sensing System detects whether the trainee has correctly placed the training pads before the AED trainer advances to the next step. This verifies pad placement accuracy in a way most other AED trainers do not, producing better-prepared trainees and more meaningful competency assessment.

Q: Can the language be changed without buying a new unit? A: Yes. English and French toggle with a simple button press — no module replacements, no hardware changes, and no additional cost.

Q: What happens if AHA guidelines change? A: The UltraTrainer™ is designed to be field-upgradeable — programming can be updated to reflect any future AHA/ILCOR guideline revisions. This means the institution avoids the cost of full unit replacement when protocols change, which has historically happened every 5 years.

Q: Does this trainer support paediatric AED training? A: Yes. The included adult/child training pad set supports both adult and paediatric AED pad placement scenarios within the same unit.

Q: What batteries are required and how long do they last? A: Three C batteries (not included) power the unit. C batteries provide longer operational life per set than smaller battery types, reducing replacement frequency in high-use labs.

Q: Is this suitable for NMC-compliant BLS skills labs in India? A: Yes. The PRESTAN AED UltraTrainer™ supports the AED operation competency requirements for NMC-compliant BLS skills stations. Its upgradeability ensures continued compliance as AHA guidelines evolve, making it a sound long-term procurement decision.

Q: What is the warranty coverage? A: PRESTAN provides a 3-year limited warranty covering defects in workmanship and materials under normal use conditions.
