SKU:

Categories: Injections and Punctures

Product Description

Why Choose the Intradermal Injection Training Simulator (Kyoto Kagaku) for Your Nursing Skills Lab in India?

The Intradermal Injection Training Simulator (Item No. M94, Brand: Kyoto Kagaku, Japan) trains

intradermal injection technique to the inner forearm — a skill distinct from subcutaneous or intramuscular injection, requiring a much shallower, more precise needle angle. Correct technique is confirmed visually: proper injection produces a visible wheal (localized skin swelling), giving students clear, objective feedback without needing electronic sensors.

The injection site offers life-like touch and resistance resembling a real human arm, and injection pads are easily changeable — with no needle trace remaining after use, keeping the trainer looking fresh across repeated sessions.

Features:

- Life-like touch and resistance matching the human arm
- Easily changeable injection pads
- No needle trace remains after injection

Set includes: 5 puncture pads, 1 forearm model, 1 supporter stand, 1 storage case, 1 instruction manual.

Specifications: Size W20×D20×H8cm, weight 0.3kg. Materials: soft resin, latex-free.

Recommended device: 29G needle (not included).

Replacement parts available: Replacement puncture pad (11346-010).

Why Buy from SEM Trainers? SEM Trainers & Systems is an authorized distributor of Kyoto Kagaku products in India with over 30 years of experience supplying medical simulators and clinical skills training equipment to 1,500+ institutions across 28 states. We provide pan-India delivery and dedicated after-sales support.

Frequently Asked Questions

Q: How is correct technique confirmed? A: A visible wheal (skin swelling) forms when the injection is performed correctly — a clear, objective visual indicator.

Q: Is this suitable for latex-allergic students or staff? A: Yes — the materials are soft resin and explicitly latex-free.

Q: How do I order from SEM Trainers? A: Contact us at sem@semtrainers.com or call +91-88495 63724 for pricing and availability.

Wheal can be shown by correct injection / This simulator provides training for intradermal injection to the inner forearm. Swelling of the skin will form when proper injection procedures are followed.
