SKU:

Categories:Muscle Models

Product Description

This life-size model, detachable into 23 parts, is an important support for understanding the complete anatomy of the human leg. The superficial and deep musculature, represented with great precision and detail, can be removed for detailed examination. The model, which also shows ligaments, nerves, arteries and veins, comes with a multilingual card. Accompanying an interactive 3D anatomical model with augmented reality is a great tool to encourage learning and support. This platform allows students

to engage in comparative analysis of anatomical models as they compare and contrast the structure of individual organs. This initiative also provides a platform for continuing education, providing opportunities for all students to increase their knowledge of anatomy, physiology and pathophysiology. One-Year Warranty Ship Weight (LBs): 25.4 lbs. Dimensions. (Inches): 45.67 x 12.6 x 9.06
