SKU:

Categories: Ear Models

Product Description

Model 1 1/2 times the actual size shows the most common pathologies that affect the external, middle and inner ear. At the level of the Eustachian tube you can see mucus and secretory otitis media; cholesteatoma and eczema are also represented in high relief. Additionally in detail you can see a comparison between 3 different eardrums: the first is healthy, the second shows a perforation and the third showing myringitis bubbles. Accompanied by an interactive 3D anatomical model with augmented

reality, it is a great tool to encourage learning and support. This platform allows students to engage in comparative analysis of anatomical models as they compare and contrast the structure of individual organs. This initiative also provides a platform for continuing education, providing opportunities for all students to increase their knowledge of anatomy, physiology and pathophysiology offered exclusively by Mogiglass Anatomy and Simulation. One-Year Warranty Ship Weight (LBs): 2.2 lbs. Dimensions. (Inches): 4.72 x 4.72 x 7.87
