Categories: Skeleton Models - Life size

Product Description

A life-size model of an adult male. This skeleton model is an exact reproduction of a human skeleton, manufactured with quality criteria, highlighting its flexibility. Stable mounting and firm structure guarantee excellent quality even with heavy use. Final assembly by hand. The teeth are manufactured separately and inserted into the jaw. Limbs can be removed and replaced very quickly and easily using a fastener. The shoulder, hip and knee joints have flexible rubber fasteners that allow for real, gliding

joint movement. In total approximately 200 bones of the skeleton correspond to real human bones in size and weight. The skeleton is anatomically correct and complete, it shows all important structures and foramina. It comes with a hanging ring, if necessary, it can be hung on a special support or from the ceiling. Detachable components: Skullcap, Skull, Jaw, Legs and Arms. Caster support for smooth movement. Accompanying an interactive 3D anatomical model with augmented reality is a great tool to encourage learning and support. This platform allows students to engage in comparative analysis of anatomical models as they compare and contrast the structure of individual organs. This initiative also provides a platform for continuing education, providing opportunities for all students to increase their knowledge of anatomy, physiology and pathophysiology. One-Year Warranty Ship Weight (LBs): 20.9 lbs. Dimensions. (Inches): 38.19 x 18.11 x 11.81
