SKU:

Categories: Disarticulated Human Skeleton Models

Product Description

A life-size model showing the complete human skeleton with separated bones: skull, axial skeleton, hyoid bone, ribs, sternum with rib cartilage, upper and lower limbs, sacrum and coccyx are represented in high detail. One side (of the left foot) are in wire, the other set is removed. The skull can be disassembled into 3 parts: skullcap, skull base and mandible. Made from long-lasting synthetic material. Accompanying an interactive 3D anatomical model with augmented reality is a great tool to encourage learning and support. This platform allows students to engage in comparative analysis of anatomical models as they compare and contrast the structure of individual organs. This initiative also provides a platform for continuing education, providing opportunities for all students to increase their knowledge of anatomy, physiology and pathophysiology. One-Year Warranty Ship Weight (LBs): 18.7 lbs. Dimensions. (Inches): 17.72 x 14.17 x 7.87
