Product Description

A realistic life size model that shows an adult's upper and lower dentition, including palate, crown, gums, upper arch, lower arch and tongue. Helps teach proper oral hygiene procedures. Made from long-lasting synthetic material and hand-assembled in detail, it is long-lasting. The movable arches can adjust the mouth opening for brushing, flossing and other functions. The model has 28 teeth. Suitable for school teaching tools, learning monitors and collectibles, it will also be an important addition to laboratory supplies. Accompanying an interactive 3D anatomical model with augmented reality is a great tool to encourage learning and support. This platform allows students to engage in comparative analysis of anatomical models as they compare and contrast the structure of individual organs. This initiative also provides a platform for continuing education, providing opportunities for all students to increase their knowledge of anatomy, physiology and pathophysiology. One-Year Warranty Ship Weight (LBs): 2.2 lbs. Dimensions. (Inches): 3.94 x 3.94 x 5.91
