Product Description

Why Choose the VATA Seymour II Wound Care Model™ Package – Light for Your Simulation Lab in India?

The Seymour II Wound Care Model™ Package – Light (Item No. AV910P) by VATA, distributed by Adam Rouilly Limited, UK is described as the most comprehensive wound care simulation model of its kind — a hand-painted, light skin tone pressure injury training model displaying ten distinct pressure wound presentations for identification, staging, assessment, dressing, and negative pressure wound therapy training. For nursing colleges, wound care specialist training programmes, and NMC-mandated clinical skills labs in India where accurate wound assessment is a critical nursing competency, this model provides the full pressure injury staging curriculum on a single flexible, life-like platform. Includes the AV901 carrying case. Washable with soap and water.

Each wound has been hand-painted to exactly replicate the clinical appearance of real pressure injuries — the detail that distinguishes this model from moulded-only wound trainers where colours are approximate. The ten wound presentations cover the complete pressure injury classification system: Stage 1, Stage 2, Stage 3 with undermining and tunneling with subcutaneous fat and slough, Deep Stage 4 with exposed bone and osteomyelitis (plus undermining, tunneling, subcutaneous fat, eschar, and slough), DTPI (Deep Tissue Pressure Injury), Unstageable full eschar/slough wound, and a 5½" dehisced wound. The Stage 3 and Stage 4 wounds are positioned to allow bridging dressings for vacuum-assisted closure (VAC) and negative pressure wound therapy (NPWT) devices to be demonstrated and practised — the only wound care trainer in the catalogue with this NPWT compatibility explicitly confirmed. The unique flexible life-like material permits application and easy removal of wound dressings without leaving adhesive residue, enabling repeated dressing change practice on the same wound site without degrading the training surface. Skills trained include wound assessment and staging, wound measurement (length, depth, undermining, and tunneling), dressing technique, negative pressure wound therapy, competency testing, and patient and caregiver education.

Why Buy from SEM Trainers? SEM Trainers & Systems has over 30 years of experience supplying medical simulators and nursing skills trainers to 1,500+ institutions across 28 states in India. We provide pan-India delivery, on-site installation, faculty orientation, and dedicated after-sales support.

Q: How many pressure injury stages and types does this model display? A: Ten — Stage 1, Stage 2, Stage 3 (with undermining/tunneling/slough), Deep Stage 4 (with exposed bone and osteomyelitis), DTPI, Unstageable eschar/slough wound, and a 5½" dehisced wound.

Q: Is this model compatible with negative pressure wound therapy (NPWT) devices? A: Yes. Stage 3 and Stage 4 are specifically positioned for bridging dressings compatible with VAC and NPWT

devices — both demonstration and practice are supported.

Q: Does the model leave adhesive residue after dressing removal? A: No. The flexible life-like material permits easy dressing removal without adhesive residue, supporting repeated dressing change practice on the same wound sites.

Adam,Rouilly offers a wide selection of Clinical Skills Simulators - Pressure Wound & Bedsore Care This Special Offer Sale Price Package VATA ™ Seymour II Wound Care Model™ includes carrying case. An effective tool for pressure wound and bedsore care techniques.

Skills Gained

- Skills assessment
- Competency testing
- Dressing techniques
- Negative wound therapy
- Measurement of wound length, depth, undermining and tunneling
- Great care has been taken to hand paint each wound just as you would see it on a patient for the most life-like patient training scenario
- Wound assessment has become critical to the operation of health professionals, as inaccurate wound assessment can misdirect the care plan, cause inaccurate reporting of patient outcomes and the appearance of potential adverse events
- Routine cleansing and dressing changes can be taught and practiced on all the wounds by healthcare providers, patients, families, and caregivers.
- The Seymour patient simulation model makes it possible to visualize and understand the differences in wounds
- This wound care model is a great tool for training, competency testing, skills assessment, dressing techniques and use of negative pressure wound therapy devices.

Features

- Wound care simulation model displays the following pressure injuries:
  - Stage 1
  - Stage 2
  - Stage 3 with undermining
  - Tunneling
  - Subcutaneous fat
  - Slough
  - Deep Stage 4 with exposed bone with osteomyelitis, undermining, tunneling, subcutaneous fat, eschar and slough
  - DTPI (Deep Tissue Pressure Injury)

    - Unstageable full eschar/slough wound
    - 5 ½” dehisced wound
- Unique flexible life-like material permits the placement of dressings
- For use with negative pressure wound therapy devices (without adhesive residue)
- Incredibly lifelike, most comprehensive model of its kind
- An effective tool for educating healthcare professionals and patients in the identification and staging of wounds and their probable etiologies
- Once the different etiologies are understood, treatment plans can be discussed and devised to deliver optimal patient outcomes.
- Life-like material that permits the application and easy removal of wound dressings, without leaving adhesive residue
- The Stage 3 and Stage 4 are positioned so that a “bridging” dressing for use with a vacuum-assisted closure and negative pressure wound therapy devices can be demonstrated and practiced

Includes

- AV910 Seymour II Wound Care Model™
- AV901 Carrying Case

Cleaning

- Washable with soap & water
