- The 3B Smart Anatomy course includes **23 digital anatomy lectures**, 117 different virtual anatomy models and 39 anatomy quizzes to test your knowledge
- Bonus: **FREE warranty upgrade from 3 to 5 years** with every product registration

TIP: You will also receive access to a **free 3-day trial to all premium features** of the Complete Anatomy app when you sign up for your 3B Smart Anatomy course.

To unlock these benefits, simply scan the label located on your model and register online. All 3B Smart Anatomy features are **completely free of charge** for you. [Click here](#) to learn more.

This shoulder joint model consists of the upper half of the humerus, as well as the clavicle and scapula. Besides showing the musculature of the rotator cuff, the shoulder joint model also shows the origin and insertion points of the shoulder muscles highlighted in color (origin = red, insertion points = blue). The following muscles of the shoulder can be depicted and even detached for a clearer understanding of the shoulder joint:

- M. subscapularis
- M. supraspinatus
- M. infraspinatus
- M. teres minor

Upon detaching the individual muscles, all movements of the shoulder joint can be carried out, namely:

- Abduction
- Adduction
- Internal rotation
- External rotation
- Raising the arms to the front of the body
- Raising the arms to the back of the body
- Raising the arms above the horizontal plane and “making circles with the arms”

The shoulder joint model with rotator cuff is set up on a stand for easy display in the classroom or

doctors office.
